Thread: [How do i find the gmail failure response?](#)

v740612 - August 20, 2017, 4:59 pm

I reached a point where i'm struggling again, i hope someone can enlighten me..

so the proper format of a login response to use on hydra is:

```
http-post-form "/dvwa/login.php:username=^USER^&password=^PASS^&Login=Login:Login failed"
```

or

```
http-post-form "/dvwa/login.php:username=^USER^&password=^PASS^&S=success message"
```

Using the info i found using burp suite, i tried to translate into gmail login response

I used this info:

Spoiler ([Click to View](#))
POST /signin/v2/challenge/password/empty HTTP/1.1

continue=https%3A%2F%2Fmail.google.com%2Fmail%2F&identifier=(HIDDEN)%40gmail.com&password=(HIDDEN)&ca=&ct=

I tried to translate it and came up with this:

http post form

```
"/signin/v2/challenge/password/empty:continue=https%3A%2F%2Fmail.google.com%2Fmail%2F&id  
entifier=USER&password=PASS&ca=&ct="
```

First, terminal keeps saying "http-post-form" command cannot be found. I don't know what to do now. And i don't know if i should just leave it out and use proxies.
