BCC is a very good coin for long term but you should need to wait for the support price to ge into it.

What do you use to purchase/exchange altcoins?

Where do you keep your coins stored?

This would be really helpful.

Why isn't BAT and Factom included in those if we're talking long-term. If we're talking long-term and we talk about BAT or Factom we're probably talking about mass-adoption globally. Strongest use cases I've seen. Honestly you wouldn't be approached by people behind one of the biggest tech companies in the world for a 500k grant for a crypto project if your project wasn't gold.

How do you see NEO in 6-12 months from now? I feel neo is still very undervalued at the moment, as more ICO's start opening in China more people will start using their code and gas system.

Not accusing you of bullshitting but many people give their calls out for "Free" right after they secured their buy-in at a much better position. Take all this "advice" with a grain of salt as OP could just be feeding you into the dump.

He was stating the support so I would think the downward trend would continue approaching that at which point it will reverse. I'm just curious if he has any speculation as to roughly how high it could go. Reach new highs? \$800s? No idea? Et cetera.

Sometimes you got to buy in again. You don't always call it. It is also not easy and it really is gambling but if you got the money to play with it do it. I suggest to 90% of people buy and hold. Read up on it don't check prices daily because holding isn't about checking prices non stop. It is about seeing what is relevant and if it would do major harm to your long term investment.

Yeah that is the thing if you trust it and believe in it then yeah buy and hold. If your in it to day trade (which is a weak term since my method of day trading is doing lots of transactions a day on highly volatile shit). Granted I am not saying I don't buy and hold into some currencies. Bitcoin I have been holding and spending for the last 7 years. Eth I got in at a fantastic price but didn't believe in it enough. XRP is one that I got my eyes on currently also Obsidian ICO White paper:

[https://drive\[WARNING POSSIBLY INFECTED\]google.com/file/d/0B5ffnLUWqKkMMG1YTXUtNjNvOGc/view](https://drive[WARNING POSSIBLY INFECTED]google.com/file/d/0B5ffnLUWqKkMMG1YTXUtNjNvOGc/view)

Site: <https://obsidianplatform.com/>

I invested 3 btc into that. Now in my opinion's ico's can be bigger gambles than some coins since they have such a failure rate. But I really like the concept of it.

Hmm I feel I should make a thread with my coins and my positions and why.

If your in it to day trade (which is a weak term since my method of day trading is doing lots of transactions a day on highly volatile shit). Granted I am not saying I don't buy and hold into some currencies. Bitcoin I have been holding and spending for the last 7 years. Eth I got in at a fantastic price but didn't believe in it enough. XRP is one that I got my eyes on currently also Obsidian ICO White paper: [https://drive\[WARNING POSSIBLY INFECTED\]google.com/file/d/0B5ffnLUWqKkMMG1YTXUtNjNvOGc/view](https://drive[WARNING POSSIBLY INFECTED]google.com/file/d/0B5ffnLUWqKkMMG1YTXUtNjNvOGc/view)

Site: <https://obsidianplatform.com/>

I invested 3 btc into that. Now in my opinion's ico's can be bigger gambles than some coins since they have such a failure rate. But I really like the concept of it.

Hmm I feel I should make a thread with my coins and my positions and why.

It looks somewhat cool and original, but I don't know if this is truly revolutionary. Its also based on stratis instead of ethereum, which is somewhat disappointing, as ethereum is so much better to base coins on.

Doesn't need to be revolutionary. I am not looking to hold that for too long. Their road-map seems promising. The coin they are tied to is not as important as what they are bringing to the table. It would be the first truly anonymous messaging platforms.

So far I've invest about \$12k into coins. I've received roughly about 4.4 to about 5k back in profits. I wasn't able to keep track of every day trade I was doing, and I might've missed a lot of peaks. However, thanks Bull for opening up a chat for signals. I never suggest to put lot of money into day trade thats why i give lots of coin daily for intra day trade. Splits money on them and make a steady income..Mid and long term signal was also given lately(XMR, OMG, SYS, UBX) and more will be come.

Mid term and long term coins are.

OMG lower then 187 sat

Strat lower then 1300 sat

NEO lower then 90000 satoshi

These all are gold if you can catch them in this rate ..They can give you good return in mid and long term both.

Edit

Always splits your funds in there parts.

1: Long term - 50% Of total from your Investment

2: Mid term - 30% =====

0.469800 becomes 4698
0.063540 becomes 6354

The last 7 days was a trial, just look at this thread, look at all the calls I've made, users have made tens of thousands and these calls were absolutely free, such as Cryptic and a handful of other users. What I need to do else about to prove myself. There is no way that nobody is making 0.1 btc back.

I haven't made shit from your posts because you post your calls too late in the thread, and also don't give a reasonable time frame to buy in to said coins. You only post "Buy under 280 SAT etc."

but never actually say when or if they reach back to those prices.

If you're charging 0.1 BTC for the same level of service but the only thing you are changing is the ability to submit feedback in the group then good luck.

Honestly, not trying to asskiss or anything, but this post is bullshit. You can't have someone spoonfeed you all your shit in PM. Buy under 280 SAT means you create a buy order for like 280-ish more or less.

I don't think the 0.1 BTC fee is reasonable either, that's 400 dollar.

@bull

Part of the reason these coins go up in prices are people from here buying in it, I'm sure. You're the one making the most money off it, because you buy first. Make the group private and the invested capital goes down instantly.

Trusting his calls is your choice. If you wanna do it, pay up. No one really offers a free paid service.

Think about it this way. If you bought BTC at 800 a few years ago, you'd be bummed out after it dropped and hovered at 500 for what felt like ages, but if you held it until now you'd have a 400+% ROI.

This is a buy and forget coin. This dip just made me buy even more.

Went from \$350 to \$500, and now I gotta do this shit on my own. I know how to do research I just don't know how to look for the right coins to research as there's so many... difficult times mates.

Trappy - August 29, 2017, 10:05 pm

The majority of Bulls calls relied on technical analysis, which is difficult to understand at first but is extremely valuable if you trade often. Analyze the history of coins, whether they pump often, and make your investments based off of that.

BlueWhale - August 29, 2017, 10:06 pm

We would be living in a perfect world if his calls were 100% accurate. Don't let the BCC drop get you emotional, continue to do your research and trade with a strategy.

yeah, that works for long/midterm analysis and also daytrading, but day trading relies heavily on graphs mostly, which is where I don't know where to look for the coins in daytrading... by the time I find a good coin the day will be over.

But in his Telegram channel he said for now he's stopping his free service.
Let's see if he resumes. Because more the number of people invest onto his recommendation, the more profit all will reap. ?

Hmm... I see this group like this :D

Bull have few good calls and few bad calls, like everyone can have, he makes group for free someone make a profit someone lose, and he 1 week after closing group and opening private paid group, ofc people who earned on his call maybe will go in, but he will get 0.1 btc per customer what is pretty much and noone guarante after 1 week he will say I am done with this bullshit I am closing that group like this group.

He is talking about students who made money, but I see only 1 "student" what is Cryptic and he is the only one who every few days post he made 140K with his calls...

Sorry but I think this group was created in purpose in the begining to be closed after 1 week and open "private" paid group.

He made few calls someone was good someone was bad but don't know... its just my opinion everyone can do this...

I am predicting OMG will go up - sell on +5%
BAT will go up , buy <0.22\$, sell on 10%

After 1 week I will give FUD info, pay me 0.1 btc everyone who want to earn on my calls, its ridicilous... if you want share your opinion share with us , if you don't then don't , why charging 0.1btc if you make millions , and you have profit if we invest in your calls more money is in and more be coin valued.

Versus_ - August 30, 2017, 5:10 am

I've never invested in those coins because I'm still learning things and I want to reach a good level before start, but I want to say that I followed the thread from the beginning and Bull knows what he is doing and of course trading it's not safe. Nobody can always do the right thing, but if you have money to invest Bull's service is totally worth the price.

Whoever is running this group seriously has an attitude of a 13 year old. Fair enough, people are giving you shit... Just remove them fuckers out of the group instead of spamming your mood swings everyday, multiple times a day. Furthermore, every single time you start raging about deleting the group, this that then pushing your "paid" group only makes you look suspicious which is why people

are giving you shit.

Either leave the fucking thing open, or close it. Stop with the idle threats and throwing your dummy out the pram because its fucking annoying as shit.

I'm sorry to interfere but seriously there isn't real reason to attack Bull.

Everyone can check graphs themselves and for example setting buy order for CURE at 5700, like he said, would get you CURE.

Today CURE went up to 6800, only for a moment but he also said to set sell order right after purchase, which would let you sell it even if you aren't on.

Difference between CURE values was more than 17%.

Same thing with other coins like MUE for 3100, even selling it now would make +6% profit so why all the hate while these advices were FREE?

Obviously no one can control market crash, but like, don't invest money you can't lose.

Literally, BTC can easily crash to 3k anytime too, it's crypto, if coins can get pumped 100% in one day then there isn't any reason why they wouldn't have chance to drop 100% in a day.

What's more these are advices, not like "guaranteed money 100% prediction", everyone should check the risk themselves to see if coin is pumped and at what stage it is.

I joined the paid group to get investment tips and to see his point of view, for me it works.

Most people here are used to getting free shit all the time. They are extremely ungrateful. People see this as "guaranteed money" when it's obviously not. So, they go and invest ALL their BTC on the first call. It's no one's fault but their own.

Hello everyone,

My posting was suspended for 3 days. Thanks Minimalist.

As mentioned in previous posts, the majority of my calls are based from technical analysis. Unfortunately the only downside to the TA is that we are limited to what we know in the present. We can not predict fake news, or policy changes.

A ton of users that were in my free group and here are acting like arrogant little shits. Blaming me for their loss.

If you don't want to follow my calls then do your own research. You can not complain about something that you are getting for free.

Take it or leave it.

Do not follow me blindly, I am not a god, I will not always be 100% correct. No one will. No one is perfect.

If you follow my signals, do a little bit of your own before investing in them. Make sure you understand where you are putting your money.

A ton of you made money from my free calls I didn't even get a single cent for donations yet you guys complain like crazy.

If you are interested in my calls, you can join my private group.

To be completely honest and fair, it looks like you for the most part are accurate in terms of your analysis. I only made 1 investment from a call you made here and it turned out not so good. I agree that it's not your fault, I'm the only one to blame for any loss on an investment made by ME.

I also agree that my previous posts may not have been fair to you or your signals, it was only one bad signal compared to your many good calls. As for not being able to predict the future, that's a given since you are not Miss Cleo (R.I.P). I was acting like a shithead, but you must understand that some of us are not in superior financial standings compared to you or others in the group. So some of these bad calls really do hurt.

I will do myself a favor and research any of your future calls, that is if you still choose to make them. I agree that nobody is perfect, hell I'm an example.

With money now being tight, I won't be able to be a part of your group. I guess I'm the only one to blame for not being more active and not being able to take part in your previous calls/group activities that were greatly successful. I've been dealing with family health issues recently which for the most part has ruined my online earnings.

I agree with you, and I apologize. I know I'm not really directly treating you badly, just the latest BCC call lol. I hope you have a good day buddy

As I have expressed to Bull in private, I am really sad the free group has come to an end but I do understand the reasons why.

Apart of BCC and EBST that are currently negative (I am sure they will come up), all the other 5 or 6 calls I have gone with had great ROIs. I just can appraise the great work invested into this and damn, and this given for free - this was such a mine.

I wonder if the group would return one day. Or perhaps if the paid one has lower fees I may want to enter - don't have budget for 0.1 for a fee atm.

I'm trying to join your group and have the .1 BTC monthly fee. How does telegram work? I have the APP but when I click on the link it says no user available.

xShadowAlk - August 30, 2017, 6:00 pm

0.1 bitcoin is expensive as fk. I only started off with .12 BTC and got up to .15 from your calls. (25% gain). You'd need .4 BTC to break even at that rate (assuming his calls stay effective the same amount) wouldn't pay this fee unless I was a millionaire looking to make more millions and \$460 dollars wasn't crap to me.

If I'm going to be honest I'm probably going to get more from investing in a good coin rather than this chart speculation pump and dump.

My posting was suspended for 3 days. Thanks Minimalist.

As mentioned in previous posts, the majority of my calls are based from technical analysis. Unfortunately the only downside to the TA is that we are limited to what we know in the present. We can not predict fake news, or policy changes.

A ton of users that were in my free group and here are acting like arrogant little shits. Blaming me for their loss.

If you don't want to follow my calls then do your own research. You can not complain about something that you are getting for free.

Take it or leave it.

Do not follow me blindly, I am not a god, I will not always be 100% correct. No one will. No one is perfect.

If you follow my signals, do a little bit of your own before investing in them. Make sure you understand where you are putting your money.

A ton of you made money from my free calls I didn't even get a single cent for donations yet you guys complain like crazy.

If you are interested in my calls, you can join my private group.

I'm tired of making you guys lots of money for free and then you treating me like shit.

Last I checked you had over 200 people in your group. If you get easily offended by a small percentage of people being negative then you probably weren't cut out to lead a speculation group. Learn to take criticism and ignore the haters

Bakedman - September 2, 2017, 11:03 am

Be very careful guys. I joined the group around 2 weeks ago and have only lost money on calls

since then. In fact, the past few calls he has made have been coins that have pumped 40-80% in the last 24 hrs and usually start to drop shortly after the call. If you try to ask for advice on your positions Bull just talks down to you like you're an idiot. I brought up the fact that a few of his calls went down nearly 20% and he threatened to kick me out of the group.

Now don't get me wrong. I know that nobody can predict the market 100%. I know that these are educated opinions and nothing more. What I am not okay with is paying .1BTC to be talked to like I'm an idiot. He told me yesterday he was going to refund me and kick me out because of my comment.(saying his calls have been going down) At the time, I was willing to tolerate his attitude. After more thought, I decided today that I would rather just leave the group than pay someone for help who acts like that. I messaged him and told him I will just take the refund he offered yesterday and leave given the situation and he told me he wouldn't offer me a refund of any sort and then blocked me.

I would advise everyone to just do your own research and make decisions yourself. Don't waste your money.

Industry - September 7, 2017, 12:03 pm

I've been very busy lately with rl shit, haven't been as active in the channel as I would like to recently.

I would like to say though, that Bull is a very knowledgeable member in the crypto currency field. He spends several hours a day researching and analyzing trade charts for the group he runs and has made amazing calls in the past week that I've been a member there.

On the 2 investments I made based on his calls which I only put about 0.02 BTC in each time, I made minimum of 0.005 per short term trade. I could have made bigger capital putting larger sums of money in, but cash is kind of tight right now and I'm still testing these new waters.

If you have money to invest, and want to make a decent return each day I suggest looking in to this group. Everything you need to know to profit and prevent losses is explained in the chat. If I still have enough money to play with at the end of the month I'll definitely be buying back in to the group.

Thank you Bull™,

Bull is an amazing swing trader. Street smart guy who have mastered the art by trading rather than just theoretical knowledge. Apart from the profits(which is cool...), he has made me a better trader by giving practical, real time examples of how to spot higher percentage trade. As with anyone, nobody can get it right 100%, especially with black swan events like China, Damon, etc. So keep good Stop loss, be disciplined.

Its worth trading with Bull to get that exposure more than anything else.

The price is pretty worth it, you'll make it back fairly quick if you have a decent portfolio size.

Most of his calls are solid give you follow stop losses.

Darkystar - September 20, 2017, 9:30 pm

Turned .4 Btc in 1 btc past week following the calls. Yes not all calls work because the market is down but stop loss is there for a reason and most of his calls give profit if followed closely.

Can't wait to invest more in both long term as well as swing trade.

Bull™ - September 21, 2017, 12:32 am

I've decided to discontinue my 0.1 BTC package.

From now on I will just offer the 0.05 BTC per month package which just gives you access to my signals.

Anyone that has purchased a 0.1 BTC packge (Full-support) will continue to have it and full support from me until it expires.

The amount of requests I was getting from the 30+ members that purchased the full-support

package was becoming too time consuming, which has been effecting the amount of coins I am able to analyze daily, and I don't want that happening in the future.

By removing this package, I will have more time to put into analyzing coins which means better calls which will result in more money for everyone.

y.flicka - September 21, 2017, 12:33 am

Invested in one of his free signals.

If it turns out profitable, I'll definitely purchase the paid signals!

Vouch! Made 12% profit in 2 days on one coin! :)

I don't usually vouch for people, but after being in his free ts room I can say that it's worth investing in his paid room and investing even more on his predictions

When I get paid in two weeks I'm definitely going to pay that 0.05

On September 20, bull made a call to buy WTC at around 32-34k sats. As a fan of this coin, I jumped on it and I'm glad I did.

It has practically doubled in less than a week.

Hey Bull I just joined the Telegram group. Are you doing this every day with coins that have potential to give people profit?

WarDaddyv2 - September 26, 2017, 12:27 pm

I am interested in joining.

On average, how frequently are paid customers getting signals (ie, 1X per day, a few times/week, etc.)? Thank you.

BadBoy - September 26, 2017, 1:53 pm

Bull's signals are amazing. I'm surprised by the amount of work and time he puts into studying and monitoring the mid-term and long-term value of the coins. Nice group man!

Vouch for Bull! I paid into the group two weeks ago and made over \$1500 in profit from his signals, could have earned a lot more if I had been a bit more brave. But definitely worth joining the group. ? Thank you bull

Also I see many people wonder how many signals he post / day and I can say since I joined there has been no day under 5 signals I can remember. He even got some good signals under the bleeding period ?

Alien8ed - September 26, 2017, 8:33 pm

I've been in Bull's free telegram group for a while. All my savings are already put in crypto and waiting for profits, unfortunately I don't have any extra to put on his signals. However, I have been researching and learning from his signals which so far are flawless.

I hope one day will have enough money to join his private group and to invest more.

I strongly recommend to anyone who has ~1BTC to join his paid group, surely he will end up at least doubled in less than a week.

Bull I have a question on how I would set up your calls.

Let's take DOPE for example.

I buy at 980, at set a stop loss for 890.

Now I can't put a sell order at 1200 or whatever, because I already placed the stoploss.

Do I have to constantly watch the price and react asap and sell at the price I want to?

I thought I'd be able to place both orders and whichever triggers first cancels the other one..

I'm trading on Bittrex.

Thanks in advance

I had this same questions and I'm interested to see what advice others have.

What you could potentially do is set up various tiers of stop losses for x% of your total investment.
For example:

"Sell 20% if value goes down 10%

Sell 30% if value drops by 15-20%, etc."

Then you'd still have some of your investment "available" for triggering a conditional sale. When setting this up it's important to take into consideration your goals and the level of risk you are willing to take, but I can't come up with a better way to automate Bittrex.

I feel like it's definitely possible to code a program that could do this . . .

I know this doesn't mean much coming from a "new account" but I used to be very active on this forum with high credibility on my old account (suspended for inactivity).

~ Anyways ~ I want to vouch for Bull. I have taken about 5-7 of his signals which I agreed and ran with them. I have profited with 100% success every single time. Unfortunately I am always a little bit late, nonetheless, I have netted 5-15% without question and would have earned more if I was there at the time of the call. Thanks man! ?

How much should we invest per call? Why do people invest little into them? I have not seen people invest equivalent to 5000 USD per call. Not even close. His calls are accurate. Although I have not invested myself I saw some of his recent free calls and compared the dates when he asked to buy and when he asked to sell. Profits everytime. If you followed the charts you would see that Dope spiked up 25%... If you cant find a way to pull out after a 25% profit then your too greedy. Day trading isn't a sit back and make money type of scheme, you have to follow along with what your investing in to and make educated decisions.

Now which chart would you be talking about? Because if you bought DOPE at 980 as recommended you'd have to sell at 980 you'd have to sell at 1225 for your 25% profit which it has not yet reached.

Did it not reach it's stop-loss price at one point? I do remember seeing it plummet below it's stop-loss price. Which would have triggered Bitrexx to sell it at loss and hence it is now irrelevant even if it goes to the moon by 30th. Not blaming Bull BTW.

Review after one week in his group. I refunded premium price, and a way more.

Bull is helpful; he helped me several times, in private. He is busy but he took time to advise me. Furthermore, he take time to explain why market is bleeding, why this currency is good and his analyzes are very good to learn.

Peoples, especially haters should stop to cry for nothing or for one bad trade, learn to put stop loss, spread your investment and follow Bull guides.

Bull is not a god, just a very advanced trader, it's rare but he can make mistakes.

A stop loss is a check point you create and once that's passed a order is created to sell at an amount you set.

Let's say BTC is at 4000, you set a stop loss at 3800 and set a sell at 3700. After BTC reaches 3800 an order is created at 3700. It's to prevent major losses from unexpected large crashes.

The last 3 calls I took had stop losses set, almost all ended up hitting them in the first hour or so after the calls. I was also told by Bull to put a sell order for my BCC @ 0.125 and that it would "Sell np". BCC is now under 0.1 and steadily continuing the downtrend.

I was treated with respect and dignity when I told Bull I was thankful for the calls I was able to take advantage of. But the moment you have an issue or questions regarding said coin, the support falls off.

I'm just thankful that I was given a free membership spot in the group, I'd be extremely disappointed if I had to pay for this lol.

To those who have made money, good on you. I however am one of the unlucky few.

I just noticed that some users are not happy because they experienced some losses during the bear market. First and foremost, I am not a god that is always 100% accurate, no one is. I am a human and all my calls are based on my technical analysis which has been stated multiple times in this thread. I have also stated multiple times that users should use the STOPLOSS feature on exchanges to prevent such losses in the first place. The ones that are always complaining are the same ones that do not use stop loss, and end up losing tons of money and then complaining about it in my thread. I also wrote a small eBook and gave it to members which explains what stop loss is and how to use it. If you can not follow my simple instructions then stop joining my group and don't listen to my calls. I am open to criticism but not your stupidity.

Then you don't have any idea about this feature. It's an order that automatically gets placed when your coin hits a certain price. This is used to prevent massive losses from occurring. You typically set the stop-loss to trigger when your coin drops more than 10% below the price you bought it from.

You can also use this feature can make you profits while you are away from your computer

Example : You bought KORE at 10k sats and put stop loss on 9k but the price pumped to 18k . You need to update your stop loss from 10k to 17K so that you gain some profit if a downtrend start from this price and you're away.

At first, his calls were nice, but recently his calls made me lose the money.

y.flicka - October 5, 2017, 1:51 pm

I am in this group since a the start. Yes I have to say that I lost quite some money at the start because of the China and JP Morgan FUD also what my problem at start was that I had no idea about stop loss and safe trading. If I would have used stoploss since start I would have more profit by now. I made my money back and in the private teaching group Bull showed me and others in the group the basics of daytrading. At first he guided me through my first few daytrades and then I started to do them on my own. I am getting better and better every day in daytrading. It may not seem like huge profits but 80-250 dollar profit of easy 2hour daytrades is definety nice especially if you can do more than one at a time. Yes I DO recommend his group but you have to know that not every call he gives is a "instant free money win". Yes some coins can drop or pump really quickly and drop again and you have to be behind it. Still If you follow what he tells you exactly and not do stupid stuff like going in to high up or not using stop loss, you will make nice profit.

Edit: If anyone wants to know more about my time with Bull shoot me a PM.

Great experience so far. With the recent downtrend in the market my current investments are slightly in the negative, but I didn't put a stop loss because I am planning to hold it longer term by choice. Overall though, I have definitely been able to multiple my money and learn a lot more about the market. His signals are nice but don't expect 100% accuracy. No one can promise you that. If someone is claiming to do that, he's lying.

Lot of good news are coming in next few weeks such as Blockhalving, Segwit activation, crowdsourced rebranding/overhaul ideas, Supernode explanation+implementation, Alexandria music and art platform. New website, logo, active dev team, intelligent dev team, pioneering supernodes whilst aiming to compete with Library Credits for the music / movie-esque marketplace idea.

It may eventually drop off, but the beginning has not even started. Huge potential. Try to get 1700 average price

Example to get the best average price: If your going to buy Florin, and the target price is 1600 sats, and you have 1

BTC to spend, Place orders for 0.33 BTC at 1800, 1700, 1600

It can easily make us 2-5X money in 1-2 month

Bitcoin gold was never considered a fork with realistic survival chances. Everyone can fork btc, but

most don't succeed.

The interesting fork coming up is the segwit2x fork as it seems like having a lot of the miners support (<https://blockchain.info/charts/nya-support>).

But as there currently is only opt-in replay protection for seg2x, this could fuck up the legacy chain pretty badly, assuming a lot of miners switch to seg2x. (<https://bitointechtalk.com/how-segwit2x-replay-protection-works-1a5e41767103>)

People always rush to give negative feedback when a few calls don't work out, and don't give much positive feedback when we make lots of money.

I want to say that Bull's recent calls (and net result of calls overall) have given myself and many others significant profit.

Most calls do NOT go into stop loss. But, even if some do, you only lose ~10%.

MANY of his calls net 20%. Not infrequently, we have earned > 100-200% on some calls.

While I do not have all day to focus on trading, this subscription allows me to keep my finger on the market's pulse - essentially working 24/7 on autopilot.

I appreciate his hard work and I think giving some positive feedback will motivate Bull to keep up his hard work. Thank you man.

Take for example his BAT call that returned over 20% in less than 2 days: entry < 2800 hit 3.6k today and even the INCNT call made good % last sunday which he called ON sunday. Vape Nation - October 27, 2017, 12:31 pm

I have followed most of bulls calls.

Most of the time they go up a few %, then drop down. I lose money on the stoploss cause he tells us where to sell, which was almost way too high every time.

Once, he told us to not use stoploss on FlorinCoin, which lost me a lot as well.

I have lost 50% of my coins following his exact instructions on about 75% on his calls.

Also, when I asked a question he responded with "how big dumb you are"

tl;dr: This guy would suit better as an indian microsoft tech support.

2/10

Sorry, but this is just stupid. You'll always make percentage gains, whatever the amount you invest. The ada call for example made me 8% and 7%. Now if you invest 1k you have 1080. You reinvest those and with the 7% you now have 1155\$.

That's not bad at all for two days with like 2min effort per day.

Always keep in mind, you only need 7.5x 10% to double your initial investment.

Bull™ - November 1, 2017, 11:51 am

The BTC bullrun is killing us all, and these coins will be more Valuable versus Bitcoin in 15-20 days. You just need extreme patience and discipline. Expedient profit and microcap market movements are proving to be really really difficult. Just wait it out and don't sell for a loss. Sell your Altcoins when they are more valuable against BTC than they currently are. Its a bloodbath for BTC and the best advice I can give you is to not make ANY trades from here on in (for the next 15 days atleast). Every trade your make, is Russian roulette..

BTC is making a major run because of China rumours and the fact that CME Futures announced they'll list BTC before the end of the year.

Best advice: Hold BTC and do nothing. Get off telegram and logout from HF and come back after 15-16th November.

Closing this thread until the 16th nov.

Amosys - November 2, 2017, 9:46 pm

After joining this subscription for 2 months I wanted to start to learn to make my own calls, but was having some difficulty knowing where to go, what signals are most important, and how to use technical analysis to make sound trade setups.

I decided to become one of Bull's students and my only regret is that I did not decide to do this sooner. I obviously have lots to learn, but I already have a strong foundation and new tools in place to make much smarter trading decisions to consistently return profit - even in this extra chaotic market.

He has regular live group teaching sessions for students as well as individual sessions. Only 1-2 topics are covered during these sessions but it is a good amount of material that's easy to follow and understand, then practice independently. He also gives many opportunities to ask questions and makes sure you are following along during these sessions, which are all indicators of someone with strong teaching skills.

I understand it's up to the user to decide on where to sell, but if you state buy price of 5500, does that mean you buy below 5500 and on 5500 only, or would that mean you'd buy at 5700 ish as well? Like is the buy price a max number or?

Little update since becoming a student of Bull's:

I've become fairly confident as a trader. Since becoming a student of Bull's and learning how to do my own TA I've been able to 5x my balance. When I first got into crypto I had no clue what I was doing and was just buying into calls and holding too long and selling into loss. Bull's taught me not only how to read charts, but also how to risk manage my trades to truly ensure never losing a trade.

Why would you ever trade a crypto currency for less than 1:1 R:R?
Minimum you should be after is 5:1 surely... This is crypto currency...

If you are risking more than you are going to make you need to get the fuck out of crypto trading.

I'm not saying you're not profitable, but you definitely aren't a smart investor.

Been in bull's crypto premium group for a month, made 300% in month.

Yesterday I decided to purchase Bull student program. And looks like it was my best investment for a all my whole time.. Very pleased with the result. The cost of the course paid off after the first lesson. I made 7% on neo within 2 hours, and near 16% within 6 hours by using swing trade.

This was just the first lesson. After 30 mins, when lesson ended, I started to use bull's suggestion and paid off money which I invested to Student Program. I think further will be even more interesting.

I already made near 15 swings and 12 or 13 of them gained me good profit AND ITS IN BEARISH MARKET AND ITS ONLY ON NEO I made very good profit using swing on another coins too.

Once I paid for Student, he added me to group with 4 Pros in trading, I can ask them everything about crypto and they will answer me :D It's a good way to study... You can ask at any time a question on which you will receive an instant response.

In general, I am sincerely glad that there are people like Bull. I am very grateful to him. And I advise everyone. It's worth it.

Am currently in the student group and I can say that I am learning a lot. You'll have to invest a lot of time in studying after the lessons and try things out. It is a pity that the student group is not that active, it has occurred that I asked some questions, but didn't get an answer. But most of the times, there is someone answering, so you can get feedback on your own work. To conclude: Really recommend this group!

Hello,

1. My main question is that how much time input is needed? I am enrolled in the army right now and do not have enough spare time for full-time thing right now.
2. How long will it take for me to earn the invested amount back?
3. The crypto-market is changing (all the macroeconomic and political variables). Is it dependent on the bull-market (the bubble) only or does it have an unique approach, meaning it will work in an environment right the current one or even a worse one?

They are indeed, but wanted to be sure. Sorry for the trouble.

So is it only based on technical analysis only or any other variables aswell? I would like to get more background information before buying into anywhere.

Basically it works like that: You will give calls there (what to buy and when) and if a certain price level is reached and/or market is changing you will follow up with a sell call?

Are the "Premium Gold Pack" benefits of the Student Program "lifetime" aswell?

When reading the whole page, it just looks too good to be true.

Just bought the \$2,000 'Student Program'. Will make an in-depth review and keep everyone updated.

All lessons are about technical analysis. You can combine it with FA, fundamental analysis to get a better view and prediction of the market. There are admin calls given, but the idea is that you can find the calls yourself at the end of the lessons and try them out. By learning when to buy and to sell, you can decide yourself when you're happy with your profit. Furthermore, you can always use a stop loss.

And yeah, you get the benefits of the premium gold pack as well.

To really benefit from the student program, I recommend you to have at least 2 btc available to trade.

When you are student you will learn how to do good TA & FA.

You will have access to private call & premium call (but main goal is to put yourself ready to find this call solo or other one since market is very large)

You will have lesson 1/2/3 time per week (followed by some documents about lesson).

Also it's like school you share your technical analysis you get comment from other student & from teacher team (strong team).

Now also you got access to new site for portfolio management & sms alert many improvement on the way !

I'm currently student and I'm really happy ;) ?

Ans : You need to follow our calls .If you don't have time to follow our calls on then I would not suggest to subscribe for our service

2. How long will it take for me to earn the invested amount back?

Depend on the market

3. The crypto-market is changing (all the macroeconomic and political variables). Is it dependent on the bull-market (the bubble) only or does it have a unique approach, meaning it will work in an environment right the current one or even a worse one?

We don't care bear or bull market since our call based on TA.

Ridiculous questions tho...

By getting student program you will get access to premium group also (for calls group)

You will have lessons 1-3 times per week, lesson will be streamed by skype / teamviewer and they will share documents for like each lesson, so you can learn.

after every lesson you will get some time to practice. you will also be able to send every chart/question to student group and ask Admins about it, is there any mistakes or something like this..

at the end I would say it was my best investment for my whole life

As I've just been banned from the student group I can give you my honest review...

Whilst I can't talk much about the actual content of the lessons as I was banned after just one, I can say the low quality of the teaching is not worth 0.2 BTC. The one lesson I did see was a skype screen share with no mic, just typing to try and teach \$2000 worth. Is this really worth 0.2BTC? Especially when you can learn all the things he will teach you for free.

The only positive I can draw from my experience is the community that the students have between them, this is where most of the learning is done.

Bull is an extremely greedy, insecure person. He is not there to help his students, he's there to leech money out of people who expect him to teach them how to trade. It seems that some of the

premium members and students would follow Bull blind into the grave, not questioning his selfish ways and disrespectful attitude towards his customers. It truly is a dictatorship.

You want to speak out against him? Banned.
You want to ask him about his strategy? Banned.
You find out he is a liar? Banned.

Thanks for teaching me about Stochastic RSI through a skype screen share which was then recorded on a trial version of a Camtasia! ?

I don't understand these fuckin raging assholes. If you do shit on the group, you are banned. That's it. There isn't any other way for you to be banned. Obey the rules, apply hard on what is taught to you and learn.

Practice, practice, practice and practice. If you have questions, just ask in the group. Bull, Cameron, Phil are the ones that helped me the most. If you have one question just ask. It is not that difficult.

And no. No one will ban you for asking questions. They are there for you, and they want you to ask them so you are able to learn.

So far, my experience has been great and I recommend it a lot. 5*.

WarDaddyv2 - March 25, 2018, 12:32 pm

Something unique offered by CryptoExpect are Bull's custom indicators. He's been hoarding them for himself with insane results.

For the right price and for the right person, he is considering to offer secure access to these indicators.

The real genius in these indicators is not the code behind them, but the unique strategy which requires experience and "trading sense".

Since they are unique/customized, the market is not saturated with thousands of people following these indicators, which gives users a clear edge.

I can't go into detail regarding the strategy behind each indicator, but it's obvious that they consistently generate accurate signals the vast majority of the time.

Combined with additional trading analysis these are excellent stand-alones or add-ons to complete your trading suite and strategy.

Here's two of them in use:

Been part of the student group for 3 months now. I've learnt some incredible skills. Risk management has become so easy. With Bull's guidance I find and execute my own trades without depending on calls (which are very profitable too) It has been with this student program that I was able to get rid of all my BTC at 12k and rebought around 7k. I don't even want to get into alt coin trades coz the results have been to good to believe. We literally had a list of dozens of coins who were sitting at their lifetime bottoms before this run began and we all made a shit load of money by knowing when and where to enter and when and where to exit.

Gains are gains only when realised, or else their just potential gains. You might be in profit but you'll never know when to sell before it drops off a cliff. You'll be in loss and you'll never know when to go double down right before it reverses. Thanks to Bull's student program we now know exactly when and where to sell, buy and rebuy.

Big shoutout to Bull and also notable mentions for WarDaddy and Cameron.

I've joined the student program and I can say the knowledge plus the lessons that are given are amazing. The admins are also very helpful and does live sessions where they teach and answer questions when they have time. I would highly recommend it if you want to become a successful independent trader. Why follow other people when you can be making the trade calls yourself? All I can say is I've made back the money I've spent on the student program and more easily. Plus with Bull alt season coming around you'd want to be able to catch all the trades.

STUDENT PROGRAM REVIEW

ENVIRONMENT/CLASS 10/10

Top-notch teachers and helpful classmates. You are encouraged to ask questions and post your own analysis. Making mistakes and learning from them is essential to becoming a successful trader. An active and knowledge-hungry student is favored. The more you contribute to the community, the more you help yourself. It really feels like being back in the school and learning from professors lol.

FEATURES 10/10

You will be provided everything you need to learn and master chart analysis, risk management, trading psychology, controlling emotions and greed. For students, there's a whole library full of trading secrets and methods to be prepared for every situation the chaotic crypto market can produce. Students and teachers post charts constantly. Discussions are open 24/7. If you miss any lesson there's always a possibility to rewatch or read them.

As a student, you have access to all the signals, even admin signals. Best option in my opinion.

PROFITABILITY 9/10

This project is bang for the buck, you can hardly find any better program. The cooperation of teachers and students helps to keep an eye on the market 24/7. This can be lifesaving when you aren't a machine like Bull who is online and making a bank all the time. There's nothing risk-free in life but the whole idea of this program is to prepare you to become an independent successful trader.

FINAL VERDICT 9/10

Why 9 out of 10? Because successful trader is never satisfied 100% and is always hungry for improvements! People making 10 BTC like nothing in a week says enough I think!

Bull™ - May 20, 2018, 4:02 am

From my experience I wouldn't recommend this to anyone.
