Thread: [VeraCrypt](#)

Alur3 - August 22, 2017, 11:43 am

Hey all,

Does anybody have any experience with VeraCrypt?

I'm looking for a Crypter and have a hard time picking, and would love some advice :)

Thanks.

Millimeter Peter - August 22, 2017, 11:43 am

I have used VeraCrypt before. It's flawless and probably one of the best out there atm.

Faith Connors - August 22, 2017, 11:48 am

Veracrypt is fantastic.

It's not a crypter in the sense to hide malware from detection though.

No I'm aware of that, should properly have used "encrypter" instead.

Thanks for the reply!

Zero remarks about it, does its job well, though I have never tried to attack myself.

Alur3 - August 22, 2017, 12:47 pm

Thanks for the replies. Will start using VeraCrypt.

If there's anybody still here, do you know of a good Data Shredder? Preferable free, but cheap would be acceptable as well.

Thanks :)

If you have the experience, you could make a program. Use a secure shredding process such DoD 5220.22-M. If not, [Fileshredder](#) is quite good.

Privazer is my absolute pick on this one. I've tried many, and only kept using this one. It is also a perfect addition to CCleaner and SystemNinja to wipe clean temporary and junk files as well as various traces of computer usage which CCleaner does not address.
