Thread: [Problem solved](#)

Villezzai - August 22, 2017, 12:23 pm

Thanks for the help ;))))))

Lucifer Morningstar - August 22, 2017, 1:43 pm

Replace it with:

PHP Code

```
<?php
```

```
$date = date('Y-m-d H:i:s',time());
```

Make sure the row has the proper type (timestamp).

Hmm, still doesn't work. No errors or anything, the data just won't show up on phpMyAdmin.

Vana - August 22, 2017, 2:02 pm

PHP Code

```
<?php
```

```
INSERT INTO table_users (username, password, email, fullname, gender, level, avatar,
admin_access, views, date_registered) VALUES ("', '$username', '".hashPassword($password)."',
'$email', '$firstname $lastname', '$gender', '0', 'default.png', '0', '$date')
```

Well that query is messed up. You have everything shifted to the right as you insert " into the `username` column and continue from there. You're also missing a value for the `views` column.

Should be something like:

PHP Code

```
<?php
```

```
INSERT INTO table_users (username, password, email, fullname, gender, level, avatar,
admin_access, views, date_registered) VALUES ('$username', '".hashPassword($password)."',
'$email', '$firstname $lastname', '$gender', 0, 'default.png', 0, 0, '$date')
```

Not sure what your column types are so the integers might need to be changed to strings.
