Thread: [Help with hacking a Joomla site.](#)

Atterrorized - August 25, 2017, 5:00 am

Been scanning this website's network and found a port 22 ssh server, don't really know how to crack ssh servers, can't find any website SQLi and XSS vulns. I'm having a hard time hacking this website, anyone willing to help? No joomla vulns in that version seems to be exploitable also.

Hello please try JCE Exploit you can copy all site that based on their server then make list txt and get this exploit an php exploit you should download XAMPP on your pc then make new folder and put all of them in 1 folder on desktop. , then open cmd wirte those command :-

```
cd desktop
cd Foldername
php jce.php list.txt
```

then don't worry this is auto sheller bot it will automaticly shell the joomla sites. :)

<https://pastebin.com/E9DFi4VA>

and that is php script.
