(Aug 27, 2017 10:26 AM)Seagulls Wrote: [\[CITE\]](#) Anybody have any ideas? I suck at wordpress and don't want to have to pay some Indian on Fiverr to help me out.

Killed me with this haha. Have you tried uploading it through FTP ? Sometimes the PHP configuration of the server has php_max_size and other factors that make it hard to upload your theme through the WP panel.

Check <https://envato.com/blog/install-themeforest-wordpress-theme/> it answers most questions.

Double posting because I just remembered that the Jetpack plugin can cause these issues. It's a compatibility problem.

Also here is a bit of code to go around the problem instead:

<http://wordpress.stackexchange.com/questions/60957/>.

Let us know op.
