Thread: [Bat Script To Boot Microsoft Windows Os into Safe Mode](#)

ritudev - August 30, 2017, 12:12 am

Open A Notepad and Copy and paste the below lines of code in it

```
@echo off
bcdedit /set {current} safeboot network
shutdown /r
echo System is rebooting in safe mode, have patience :) silent_nuke
timeout 3
```

save file as safemode.bat

Hi ?

Can you explain to us what mean {current} in this script ? and please use tag `[code]`[/ code] when you post a code !

Thanks !

DUCKBOY - September 12, 2017, 8:15 am

Tried this out, doesn't work for me o.O

The correct command is : bcdedit ?

This will set the safemode switch:

Code bcdedit /set {current} safeboot minimal

with networking:

Code bcdedit /set {current} safeboot network
then reboot the machine with

shutdown /r

to put back in normal mode via dos:

Code bcdedit /deletevalue {current} safeboot
