Thread: [phpBrute - AIO module under construction \[EASY CRACKING\]](#)

Conscious - August 30, 2017, 4:07 pm

Guys im working on a module for phpBrute !(More info on phpBrute [click here](#))

Module will make it easy for everyone of you to crack sites that has cloudflare protection and/or SSL handshake fail in sentry MBA.

its currently working but I plan to add more features such as token, capture and so on.

EXAMPLE:

Code php phpbrute.php -m allinonebeta -i C:\mycombos\nicecombo.txt -p

C:\myproxies\goodproxies.txt --crackurl=https://www.url.com/login/

--referer=https://www.url.com/login/ --postdata=username=[USER]%password=[PASS]%login=1

--successkey=Logout --failurekey=Invalid-t 50 -o hits.txt --cloudflareWill soon share this module just want everything to work first!

So far the only thing I need to add is --token flag and --capture flag to be able to crack sites that uses token and/or to capture stuff on successful login!

My other modules can be found here:

<https://hackforums.net/showthread.php?tid=5706562>

Still not finished and Token function is not really working as expected yet.

Spoiler ([Click to View](#))

It will be so awesome! :)

phpBrute is golden @Yani, ty so much for sharing it open-source with the community.

I'm confused it hasn't been more recognized on a hacking forum ? ?
