Thread: [best motherboard for a ryzen build?](#)

FatStacks - September 2, 2017, 8:19 am

Hi was curios on your opions for the best ryzen motherboard. I went ahead and ordered the croshair hero 6 and was curious if you think that was the best choice. Also reccomend me some ddr4 3200 mhz ram. I was thinking of going with the trident rgb dimms they got. Thanks for your time.

astano - September 2, 2017, 8:32 am

It kinda depends on what you want to do with your pc. Give us some more information

Everything honestly. Wanted a board that would work for everything including OCing and maybe water cooling in the future

I hope you're kidding

The_Right_Stuff - September 2, 2017, 9:45 am

Crosshair is an overpriced mobo. A gigabyte Gaming 7 is better & more reasonable price. I honestly would not go over a B350 Gaming 3 unless your doing some custom loop trying to max your overclock.

SOOOO I kind of already ordered it and really want to just know if you guys think its a good motherboard. I really like all the 3.1 usbs it haves as I like running ssd's off of usb sometimes.

I seriously hope you're trolling

FatStacks - September 2, 2017, 3:52 pm

Still never got this answered is the ch6 a good board?

The_Right_Stuff - September 2, 2017, 3:53 pm

(Sep 2, 2017 03:52 PM)FatSac Wrote: [\[CITE\]](#) Still never got this answered is the ch6 a good board? Its overpriced to shit. But its not a bad board. No point going over Gigabyte B350 Gaming 3 really. And highest end I would never get above a Gigabyte Gaming 7

Yea, but really don't care about paying 50 more over other boards. Just want something that is going to work for everything and last

It's supposed to be delivered tomorrow.

Its not 50 dollars more its like 100 more than a decent mobo.

The Gigabyte Gaming 3 is perfectly fine unless your trying to get max overclock on custom loop cooler and care about the extra 50mz.

ayyboss - September 4, 2017, 7:51 am

I have an asus b350... don't get a x motherboard anyways and from what I heard mini itx ryzen boards are trash for now
