Thread: [Bootling error](#)

Bouzazi - September 2, 2017, 5:08 pm

Bought a new Lenevo computer, after successfully installing the OS (dual boot with Windows 8.1) I encounter these errors when booting.

```
Code Sep  3 01:58:09 boz kernel: [ 4625.900071] nouveau 0000:03:00.0: fifo: SCHED_ERROR 20 []
```

```
Sep  3 01:58:09 boz kernel: [ 4625.900086] nouveau 0000:03:00.0: fifo: write fault at 00001c2000 engine 05 [BAR2] client 08 [HOST_CPU_NB] reason 0c [UNSUPPORTED_KIND] on channel -1 [007fd76000 unknown]
```

```
Sep  3 01:58:09 boz kernel: [ 4625.900096] nouveau 0000:03:00.0: fifo: SCHED_ERROR 20 []
```

Error repeats for 30..40 time (fast) on screen than the system boots successfully.
What causes that error? Any ideas?

I was going to type this all out, but found someone who explained it better than I ever could have anyways.

askubuntu.com/questions/897627/ubuntu-showing-sched-error-20-on-boot

Hope this helps, if it doesn't let me know!

The exact solution. Thanks!
