Thread: [Ransomware Tool](#)

nirmalkant - September 4, 2017, 6:57 am

Is there any free tools to detect ransomware in PC? Please suggest.

Detect as in identify? If so, use this:

<https://id-ransomware.malwarehunterteam.com/>

Unrelated, but how are you posting from prison?

<https://www.bleepingcomputer.com/download/ransomfree/> might be of use to you.

Other than that, there is a wide range of ransomware-specific decryption tools on bleepingcomputer available. I can't personally vouch for them as I have never been the victim of ransomware, but they're out there.

My bad, I thought you meant 04/09.

CryptoPrevent from FoolishIT is an excellent program for preventing ransomware infections as it stays up-to-date with new and emerging threats.
