Thread: [What to do with recaptcha result?](#)

FBI - September 4, 2017, 10:15 am

I am playing around with anti-captcha, and as my captcha's are solved I get this result back:

Not sure what to do with this string to solve my recaptcha and can't seem to find any good documentation on it?

Here's the example: <https://anticaptcha.atlassian.net/wiki/spaces/API/pages/5505035/Examples>

You post at as g-recaptcha-response I think.

Vana - September 4, 2017, 10:19 am

For whatever request the captcha is needed for, add a POST param "g-recaptcha-response" and set the value to that result.

I tried setting it to the response but it keeps saying:

"org.openqa.selenium.ElementNotInteractableException: Element is not visible"

I tried using this to correct that:

<https://stackoverflow.com/questions/12363038/selenium-webdriver-click-on-hidden-elements>

but it turns out the element is already set to visible? Just not showing?

EDIT: solved my errors, just had to tweak the javascript a little. Thanks for the help guys!
