Thread: [Looking for \[BRAND NAME REMOVED\] Plus crack for Android apk](#)

wantTinderCrack99 - September 7, 2017, 9:20 am

Hi Guys!

Sorry ? I am not a hacker. user ONLY.

For some time I'm looking for a crack for [BRAND NAME REMOVED] Plus for my Samsung Galaxy J5.

I have really tried all the variants you could find on You tube. No working. ?

The last variant which should work with SWIPELY for [BRAND NAME REMOVED] brings the following error:

Error

URL blocked: This redirect failed because the URI was not set to Whitelist to redirect to the app's OAuth settings. Make sure client and web OAuth login are enabled, and add all your app domains as valid OAuth forwarding URIs.

Question: Does anyone of you have a working [BRAND NAME REMOVED] plus crack?

Can someone help?

Thanks?

In my opinion. you should be trying looking for that android app crack in relevant forums such as Xda-developers, androidcentral, and droidforums.

Good luck though.

Fucci - September 7, 2017, 9:27 am

It's not like [BRAND NAME REMOVED] Plus is a separate app.

[BRAND NAME REMOVED] Plus is simply a subscription service built into the [BRAND NAME REMOVED] app itself.

There's no crack for Android APK, whoever tells you that is a liar.

Don't be filled with disillusion, the world isn't like how they show in the movies.

Hacking feats aren't just some magical thing where you type something into the CMD line or terminal and BANG you're "in" and you've suddenly hacked [BRAND NAME REMOVED].

THANKS FOR THIS CLEAR ANSWER!!! ?
Than I will stop to search for it! ?

Did you make an account just for this :-)?

SIM-3405474 - September 26, 2017, 11:42 am

I don't think it's possible since it's an online subscription

lwristis - September 26, 2017, 1:02 pm

The users saying it is an online subscription are correct. There used to be old versions of the application in which you were able to have a modified APK for unlimited swipes. That was simply because the limiting swipes was client side. [BRAND NAME REMOVED] has since then upgraded their service to be server sided and therefore cannot be exploited through a cracked or hacked apk.
