chromebooks are made for chromium handling on low end hardware so it would be better to buy any computer without OS or with linux and use it

It's possible, but I wouldn't recommend it if you don't have to.

If you must...look into crouton on github

Chrome Books are not that great. Just like Black Cat said they use low end hardware. I repaired a few CB Mobos and the # one thing that I mostly repaired from them were the USB ports and the power connector. They use crap solder on them for some reason, IMO.

They are meant to be used for classrooms and small projects like Netbook and others similar to those specs.

Like I said that's all IMO.
