Thread: [How many bots will hold this VPS?](#)

RichChiggax - September 8, 2017, 3:14 pm

Hello HF,

I have a question...

My current specs of my VPS are:

1 core

1024 RAM

Cent OS

BW unlimited.

I know this is not a VPS to hold thousands of bots. But im still curious how many bots will hold this? At 70 bots my botnet will slow down, and it takes 3 minutes to load the bot into my botnet. Also 3 minutes to change till he is offline.

The knock interval is on 1 min.

Should i put that lower?

I can't understand why it will trip after 70 bots. lol

Even my Flux Shared Botnet Host can hold more bots.

I had like 350 bots on it. It was slow, but no problems.

Can anyone point me something? And tell me how many bots this VPS can handle? Thanks in advance ?

JustMe1337 - September 8, 2017, 3:22 pm

I do it like this

-> Hosting a HTTP Botnet (ZyklonHTTP) and search the nice ones out and infect them with a rat (Imminent&Orcus) which is hosted on my vps (2x2ghz 2gb ram) 24/7 online.

The HTTP Botnet can handel much more bots than the botnet/rat on such a small vps.

Which bot are you using?

Currently i use LiteHTTP.

I need a bot holder for mining.

Any good loader that i can buy or take for free?

Let me know please.

Let me know please.If your looking for a decent loader thats free use gaudox, besides you shouldnt load more then a couple hundred bots seeing that your vps cost \$3 dollars a month

Don't care if it's free.. Anyway bots dropping also on Gaudox.

Also this is an free updated bot.. You think Gaudox hold more bots?

?

(Sep 8, 2017 03:24 PM)Friedrich Nietzsche Wrote: [\[CITE\]](#) Get Quant or Godzilla (paid, can be found on exploit.in) or use Gaudox (free)

I have no account... It's hard to register in there.

But i want to buy it. You think this VPS i have and Gaudox will hold more bots?

Like 1 or 2000?

But why litehttp not?

<https://github.com/zettabithf/LiteHTTP>

?
