Thread: [2FA/GUATH is correct but still can't log in.](#)

USERNAME_NIGHTGHOUL_ - September 8, 2017, 10:44 pm

Ever since 9/5/17, I was logged out the website and wasn't able to log back in. Did Omni reset or do some type of update to the site? I know all my info is correct but I'm still unable to log in.

Account Name: NightGhoul

Thanks in advance!

nope but make sure your using your updated password u changed to

VirtualFrost - September 8, 2017, 10:47 pm

Nope nothing has been changed.

The device you're getting your code on, is your time set automatically?

Assuming you're using your phone, inside your phone settings is your time set automatically or manually?

Automatically.

VirtualFrost - September 8, 2017, 11:23 pm

(Sep 8, 2017 11:12 PM)USERNAME_NIGHTGHOUL_ Wrote: [\[CITE\]](#) Automatically.

Is it actually saying it's the incorrect code?

I notice that you changed your password in the last week.

I haven't changed my password last week. All I've done was reset to try to help me get into my account but that didn't work.

If you successfully changed it then yeah you changed it. Not sure what else to say then.

I think I just may end up paying Omni \$20 BTC to reset my 2FA.

Try to login using your email instead of username.

Try to reset your password (you never did "Last Password Change: Never")

And you have never once validated your Gauth code, so just to let you know, the code is a 6-digit one.

Omniscient - September 9, 2017, 10:32 am

Having a hard time believing your code isn't correct. More like you just lost it. Did you backup the code? I tell you what, if you did and then I'll reset your gauth for free. My guess is that either you lost it or your time is wrong.

Mr. Robot - September 9, 2017, 10:34 am

I think you might have reset your password and been emailed a new one. Try the new password that was emailed to you with the 2fa.

HuntedCS - September 9, 2017, 10:48 am

Your password was reset in the last week, make sure that is right, and always save your backup codes!

M?xim - September 9, 2017, 11:06 am

Quote:Password Reset in Last Week: Yes

Last Password Change: Never

Someone who can explain this? ? Kek.

The password reset doesn't count as a password change afaik

Truth - September 9, 2017, 11:44 pm

I remember I had to connect my 2FA device to internet for it to work, so make sure your device is

online.

Good luck :)

Why do you have to do that? I don't have to do that with my device, I just have to make sure the time is the same.

How does it communicate else without internet?

Charger - September 11, 2017, 10:10 am

It doesn't need to. 2FA relies on time to determine the key. You just have to have the same time.

Quiver - September 11, 2017, 11:59 am

As others have mentioned, your password was reset within the past week. Go to your email and see if you can find the new temporary password. If not, just try resetting your password again and see if you can get in that way. You'll still need to use 2FA but this will determine if it's your password or your 2FA that is causing problems.
