I am bad at explaining but:

You can send a post request via html using this code(page.php is the page you want to send the request to.):

PHP Code

```
<?php
//Everything in the <form> code will be sent
<form method="post" action="page.php">
//Textbox to put value in
<input type="text" name="value1" />
//Button to send post request
<input type="submit" value="Send" />
</form>
```

In page.php you will have this code:

PHP Code

```
<?php
$value1 = $_POST['value1'];//This will get the value of the textbox and put it in $value1

echo $value1;//This will echo out the value
?>
```

Google it

I couldnt find it from google thats why I post it here, and nobody force you to reply me.

Then you should consider learning how to properly do google searches

BenzaHdd - September 12, 2017, 9:55 am

You need to use a POST or a GET. POST's are recommended as GET's can easily be forged and adapted.

Do something like this :

HTML

```
<form method="POST">

<input type="text" placeholder="Your name here" name="name" />
<input type="number" placeholder="Your age here" name="age" />
<input type="submit" value="Submit" />

</form>
```

PHP

```
<?php

$error = 'Your name and age is required';

if(isset($_POST)) {
```

```

if(isset($_POST['name']) && isset($_POST['age'])) {
    $name = $_POST['name'];
    $age = $_POST['age'];
    echo $name.', your age is '.$age;
} else {
    echo $error;
}

} else {
    echo $error;
}

?>

```

Hope it helps.

Nixco - September 12, 2017, 4:33 pm

index.html

```

Code <form method="POST" action="login.php">
    <input type="text" name="username" />
    <input type="password" name="password" />
</form>

```

login.php

```

Code <?php
$username = $_POST['username'];
$password = $_POST['password'];
echo 'Your password is ' . $password . ', Mr. ' . $username;
?>

```

Just to explain the concept. Please do research about MySQL injections if you intend onto storing data into a local database. The code I provided is not intended for public use.

https://www.w3schools.com/php/php_forms.asp

If you tried using Google, you should give up on learning to code.
 There's a point where you need to ask a forum, and this is not one of those.
 If you can never figure out this by yourself, you will literally never make any progress.

DO NOT DEPEND ON OTHERS FOR YOUR OWN PROGRESS.

I reckon he should give up on a lot more than just code if he can't google correctly.
