Toxic Hacker - September 12, 2017, 6:27 am

Greetings everyone! ?

I was wondering if it's possible to protect/make anti-vm, anti-sandboxie, on a rat, so they won't leak my dns, ip.

Revenge-Rat doesn't have any of these options, whenever if i crypt it with Aegis, it will make the detection worse..

sry for bad English.

PM me if you got idea.

Also is this possible to bypass Anti-Sandboxie?! It's not possible prety sure ;c

Reverse engineering the binary will always reveal these details, no matter how hard you try to obfuscate it.

Sorry, but no.

Not sure why you don't just use a VPN that enables portforwarding and doesn't keep logs instead of your IP...
