Thread: [sqlmap can't find the vulnerability](#)

Freshyx - September 12, 2017, 7:04 am

Hello,

I found an SQLi manually and tried it with sqlmapp too, however sqlmap couldn't find a vulnerability. It is mariaDB error-based, however the error is hidden in the source code.

Example:

Code An unexpected database error occurred. Please try again later.

[b]<!--[/b] Mysql prepare error: You have an error in your SQL syntax; check the manual that corresponds to your MariaDB server version for the right syntax to use near "" LIMIT 1' at line 1 -->
The comment is not displayed unless you look into the source code with the browser and I don't know if sqlmap recognizes that.

The vulnerability is very easy to find because I got this error with simply putting a Code ' behind the GET parameter.

My sqlmap syntax:

Code sqlmap.py -u "http://URL/product[/quote].php?value=test" --dbms="mariadb" --level=5 --risk=3
Hopefully someone can help me!
