Thread: [\[wifipass.cmd\] - shows wifi-password - patched](#)

ImDeepWithWindows - September 15, 2017, 11:25 am

this script shows the wifi-password on your screen,
it takes like 1 or 2 seconds to run

this is an updated version of a script i posted a while ago, now it also works on wifi-networks that have spaces in their names (previous version didnt)

also has error msgs for when u dont have wifi hardware on your computer or jsut arent connected to a network

source posted [here](#)
