Thread: [the current bios setting do not fully support the boot device - help me](#)

K r y - September 15, 2017, 7:48 pm

hey hf,

i just tried booting up my pc, and it gave me this error: the current bios setting do not fully support the boot device

it doesn't even list my hdd.

i googled it already and tried stuff out but none of them worked.

my pc worked fine a few hours ag

ty

Go into your BIOS setup and then disable 'safe boot' mode/option. Once you've done that, go into your boot menu as you're restarting, and then select your HDD or whatever boot device you like.

Doesn't work...

Someone please help me...

BIOS settings depends on your OS which is installed on computer, so it would be good to tell us which OS you use.

For windows 7 or older you should use Legacy boot with CSM enabled

Everything after Win 7 should be setted up to AHCI, Secure boot, UEFI boot.
