Your using TunnelBlick. Open the config file in a text editor and remove the line "block-outside-dns" from the config and you are good to go.

Hey Brothers, i see some guys have succsefully set the vpn up. I am Having it tough over here as i have never used vpn before so setting it up is challenging. I use linux and i have run aptget install openvpn(version 2.3.2) as i tried downloading from the official site then ./configure worked, but make and make install refused, so i decided to take the linux apt-get method. i have also downloaded the config files for both countries, but am now stuck from there, i dont to where to log in with the credentials, so kindly if you succeeded guide me please ? . Thanks

kamrulahsan06 - October 30, 2017, 9:32 am

Hey,
Thank you so much for this service. I've already received my credentials but I can't find new links to the openvpn configs, those received in PM are dead.
Thanks again :D

Edit: Actually, the IDs I had were for your old project which is now closed I guess, so if it's not the same IDs I'd like to have new ones with the configs please.
Thank you so much
