Thread: [HTTP botnet vs IRC botnet?](#)

javinzplayer - September 16, 2017, 9:57 am

Im looking to get a botnet and I see a lot of topics on IRC botnet's and HTTP. If you ever used a HTTP or a IRC botnet is there any pros and cons on them? Thanks for helping me! ?

javinzplayer - September 16, 2017, 7:47 pm

(Sep 16, 2017 07:21 PM)Pjotr Wrote: [\[CITE\]](#) Strongly advise against IRC botnet. It's communication channel of the past. Highly suspicious and no serious bot is made over IRC there days.
Do you know what you need for a HTTP botnet?

AnonTri - September 16, 2017, 9:43 pm

(Sep 16, 2017 07:47 PM)javinzplayer Wrote: [\[CITE\]](#) Do you know what you need for a HTTP botnet? HTTP server or http hosting. MySQL server (or any other SQL server), the panel files and the bot.

Yattaze - September 20, 2017, 2:34 am

Http is the current standard, ideally, you want a peer to peer or blockchain based one, these are very rare and difficult to develop compared to HTTP though
Don't even touch IRC, unless you encrypt every command and run the server privately I guess, either way, decentralized is the way to go if you're truly serious about botnets

MaDTiA - September 21, 2017, 3:21 am

i recommend you a http botnet , irc is obsolete nowadays ^^ if you need help to setup it feel free to pm me

0xDEADDEAD - September 21, 2017, 5:13 am

HTTP is the way to go nowadays. Maintaining IRC bots and getting a reliable source is really a trouble.

HTTP Botnets are the way to go as the people above me say. IRC Botnets are good too but it's hard to get reliable sources and it takes time to configure one properly..

AnonTri - September 21, 2017, 6:37 am

IRC is good for a few things that you want done at the same time and instantly. If you use SSL and encrypted commands it would be better but IRC traffic is hard to hide on a network.

well that all depends. back in the day i use to hold 150,000 rbots on irc. all servers were made from high uptime bots. hidden servers.

it was a constant add new servers, pull old dead servers from configs etc.
none of our commands were encrypted, had a couple issues with people trying to steal bots but they never succeeded :)

Obsoletionist - March 15, 2019, 10:35 pm

I'd go with IRC depending on your needs, IRC botnets are relatively easy to setup. Provided you're wanting it for obvious reasons go with IRC. For "Monetization" your best bet would be an HTTP botnet. I'd recommend one that can be used for "herding", if I recall right just sit on some bots, and then drop cryptominers on the PC's that are linked to some really good pools. I'd recommend starting with upcoming altcoins speculated to "take off", and throw them into a crypto portfolio, so when they do skyrocket you've got coins out the ass.

pamarama - March 16, 2019, 9:20 am

irc botnet is useless with a private irc server anyways, you could be running http with that private server

if you can't even code a basic node js C2 you don't deserve a botnet

ZERO2SIX - March 16, 2019, 9:25 am

if u just start with botnets i should go for HTTP.

makmak - March 16, 2019, 10:31 pm

HTTP all the way , IRC obtian and also in alot of ways they come pretty usles..

Goldmouth - March 18, 2019, 8:57 am

OH wait you think I was asking you to give me something? I wanted to repost a download for the community because they were asking I can careless. Hence how I closed the thread. and you weren't the only one I PMed about it. You arent a special snow flake. you are just a flake. Get off my threads and stop leeching.

Nothing there. ?

just banter no need to get upset. Sorry I hurt your feelings.

Dotexe - March 18, 2019, 3:57 pm

Go for HTTP, IRC is just dead

If you plan on building an HTTP botnet project from scratch UBoat is a good reference source to start off with. Otherwise, no.
