Thread: [\[TUT\] Proxy - Finding and testing](#)

Vip3rr - July 28, 2010, 5:33 am

1. What is Proxy?

In computer networks, a proxy server is a server (a computer system or an application program) that acts as an intermediary for requests from clients seeking resources from other servers. A client connects to the proxy server, requesting some service, such as a file, connection, web page, or other resource, available from a different server. The proxy server evaluates the request according to its filtering rules. For example, it may filter traffic by IP address or protocol. If the request is validated by the filter, the proxy provides the resource by connecting to the relevant server and requesting the service on behalf of the client. A proxy server may optionally alter the client's request or the server's response, and sometimes it may serve the request without contacting the specified server. In this case, it 'caches' responses from the remote server, and returns subsequent requests for the same content directly.

2. How does it work?

Without Proxy

[img]http://img717.imageshack.us/img717/6254/sanstitre8a.jpg[/img]

With Proxy

[img]http://img697.imageshack.us/img697/2060/sanstitre7n.jpg[/img]

There are three types of HTTP Proxy servers:

L1 - High Anonymous Proxy (Level 1): The web server can't detect whether you are using a proxy by the information your browser sent.

L2 - Anonymous Proxy (Level 2): The web server knows that you are probably using a proxy, but it can't detect your real IP.

L3 - 3) Transparent Proxy (Level 3): The web server knows that you are using a proxy and it can also detect your real IP address.

3. Finding Proxy servers

You will need Proxy Finder Enterprise 2.5

Install -> Run -> Find (its that simple)

[img]http://i42.[censored].com/xeorgg.jpg[/img]

Ok, we found our proxies, click "OK" and "Save"

4. Testing Proxy servers

We are going to test our proxies so we can see which ones are L1, L2, L3 ... and which ones dont work.

For this you will need Proxy Fire 1.22

4.1 Click on "Import" and find you proxy list you got with Proxy Finder

4.2 Click "OK"

4.3 Select which ones you want to look for

4.4 Click "GO"

[img]http://i43.[censored].com/ztulaa.jpg[/img]

After the scan is done, click on "Result Dir" and you will find your fresh proxies.
