(Sep 19, 2017 03:53 PM)Skarrix Wrote: [\[CITE\]](#) I've been studying a bit of python lately, and i've been looking into submitting form data with urllib but I can't seem to figure this one out. I'm trying to create an account generator for this website:

Can somebody help me with this?

okay so this is what I have so far, can anyone help?

pastebin. com/pT4pSj7d

try using the requests module, much easier.

PHP Code

```
<?php
```

```
import requests
```

```
mail = "testacc"+str(random.randint(1111,99999))+"@gmail.com"
```

```
usr = "fffff22"
```

```
pwd = "ffff111"
```

```
values = {
```

```
    "birthDate" : 25,
```

```
    "userName" : usr,
```

```
    "password" : pwd,
```

```
    "passwordAgain" : pwd,
```

```
    "email" : mail,
```

```
    "emailAgain" : mail
```

```
}
```

```
r = requests.post("https://www.wizard101.com/user/registration", values)
```

```
print(r.text) -- responce
```

haven't tested it, if you see an error and fix it and it still doesn't work try using the request headers and do

Code r = requests.post("https://www.wizard101.com/user/registration", data=values, headers=headers)headers is a dict
