Thread: [Posting images](#)

System[X] - September 21, 2017, 1:15 pm

Sounds stupid but we used to be able to add an image to a thread by
Code [img]http://mysite/myimage.png[/img]but its not working ?

Whats wrong here

Thanks

Your image must begin with HTTPS as the form is now forced SSL and importing non-secure elements doesn't work.

Eagle 95 - September 21, 2017, 1:19 pm

Also, it needs to be a direct link, not the link pasted from browser bar.

His post stated the URL ends with .png

given the mime type is actually .png, his URL should work with HTTPS given the certificate of domain.com is valid

Yeah then he should be getting that https certificate in order to work. Honestly, I think it's a big hassle for nothing here. Just use imgur. ?

Got it, thanks, reason for being unaware is that i have been away for almost 3 years.

Thanks
