Thread: [Any SMS Hacking Guides?](#)

room237 - September 21, 2017, 2:57 pm

Hi there,

I'm looking for a way to get a log of someone's SMS text messages, iPhone or Android. Is there a way to do it without banking on them downloading some file from an email or text message? Let me know how I can do this or even link me to a reliable guide on how to do this.

Also, I have a secondary question. It seems a lot of hacking guides for getting someone's personal information, passwords, keylogs, etc. requires them to be phished. I know phishing is not allowed to be discussed but what are some other ways to go about doing this? Is there a way to do it without, like I said, "banking on them to download a file?"

Thank you!

He explicitly stated methods that dont require the target to download a file Imfao

Also, you cant get logs but look into getting something like a hackrf or some other sdr.
