Thread: [Best first programing language to learn?](#)

Elduin - September 22, 2017, 2:37 pm

I'm wondering what first languages would be good to learn for a beginner.

Have tried python but it doesn't feel like it's at beginner level.

Which you think I should learn first and second etc and any good website curses you could share?..

Thanks.

Fizure - September 22, 2017, 2:41 pm

I would recommend python. If your interested in learning you can check out my thread.

Alright, I've started the free curses on python and progressing fast.

I guess I'll keep work on python. Thanks.

I suggest C

Everything makes sense and there is no magic, just a simple small language. Python is too abstract for beginners.

I hated python. Start with C or Java to really get your feet in

Alright, any suggestions on a good beginner curse?

If not I'll try to find something.

Well for me, I started with Scripting languages such as Lua, and Ruby. Those got me started.

Xogg - September 24, 2017, 12:51 pm

Don't get in the loop of Microsoft, please learn something native a few are C++ and Delphi

Malentor - September 24, 2017, 4:46 pm

My first language to learn was PHP but I would love to someone advice me to start with Python instead, lots of tutorials in internet, easy to understand and simple syntax.

Also, the logic of a language that you will learn will apply for any other languages. Just start with something that you have passion with. For example I wanted to make websites so I started with PHP, if you want simple scripts or from simple basics take Python.

Now I'm learning C and is also a good language.

C++ IMBA :D

1. Fast
2. Veryyy Fast
3. Compatible for fucking EVERYTHING.
4. Not Low Level not Highlevel :D its somewhere in between.
5. Maybe a bit difficult to start with it, but this Language is like ENGLISH "Fucking International" and other programming languages are like "German or Francaise" if you know what I mean :D., useful and good but you can't compare it to English.
6. best things I ever knew was/are made with C++ : Windows OS "Microsoft" , My Favorite Games like Counter-strike, MSN Messenger back in the days , IRC, Google, Mozilla, Winamp Music Player, MySQL, 3d modeling software "Maya3D" ...and so on.

I agree with, Abraluna.

C would be an excellent start for you.

C++ has quite a few tools and features (especially with the release of C++17). It may be overwhelming to try and fit all those pieces together.
