Free hosting is not automatic as I like to read over what is being added to the server.

Guess it's a common sense to say that it's the company's lifetime not you as they're the ones doing the service.

If they stopped their service then that would be the end of your free hosting as well. So always make a backup of your sites files & database ?

cPanel loads fine for me, it could be that your name servers haven't propagated yet

HulkSmash - November 21, 2017, 8:21 am

It only does it when i try to ftp. I cant get it to work it keeps saying login failed in filezilla. Im using all the info in the email, and even downloaded the config file for filezilla but still it doesnt work. It says incorrect login for the password

SIM-3323508 - November 23, 2017, 9:45 pm

Accepted 19 free orders today.

There have been a couple of filezilla error reports. One person happened to fix his by updating his core. If you are having FTP issues you can always login to cPanel.

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
Minimum = 278ms, Maximum = 281ms, Average = 279ms

Kindly check both NS.

The default value of NS is: [NS1.SERVERBOX.US](https://www.serverbox.us/77.72.0.13) = [77.72.0.13](https://www.serverbox.us/77.72.0.13) & [NS2.SERVERBOX.US](https://www.serverbox.us/139.162.254.53) = [139.162.254.53](https://www.serverbox.us/139.162.254.53)

But when i ping your domain i find 77.72.0.154. Check both NS.

Another think: Check your e-mail where you find ns from Serverbox.

Keep calm and take a look

<https://imgur.com/a/rNog4>

But i can access cPanel and FTP through FileZilla but cannot open website.

Now i can access website and ping also works. But at any time website stop working and ping also stop working. Why?

<https://imgur.com/a/Ub5CN>

take a look

I though this problem is from CloudFlare so i removed cloudflare but still website will stop and run anytime.

LOL

Again website stop working > <https://imgur.com/a/mMWPa>

Make sure you have your name servers properly set up, all servers are currently up and running free and paid.

v.e.n.o.m - November 25, 2017, 7:09 am

Are you kidding me?

Check the screenshots, I already set nameservers properly thats why i can access my website for few minutes. Then again stopped. Did you check all that screenshots or not? and my hosting is not free. Its paid, i was bough yesterday from serverbox.us 1 year plan.

Don't put all blame on nameservers. Everything is fine. I also recheck that. Ping also works fine then website open. Otherwise both down at same time.

Before 20mins my website works fine and now its again stopped working.

From what I read in the thread it seemed like a name server error. The server is online, it is an issue on your end. You are on the same server that ServerBox.us is on.

v.e.n.o.m - November 25, 2017, 10:40 am

You'r hidding your mistake i think, becoz if nameserver has error then how can i visit my website when its online, Maybe i want refund. Cannot run with this hosting at all.

I see it, again I think it is just the name servers updating and propagating. It can take up to 48 hours to fully propagate.

Why subdomains are not working.

Hmm. We're having trouble finding that site.

We can't connect to the server at www.helpdesk.nexaze.com.

Our main website is down, I have null routed my site until I can move servers and put it behind proxies. We should be back and running within 48 hours. Nobody's service should be affected, only the client portal and ServerBox.us its self.

Odd, my service seems to be down. Could just be a slight issue with it though unless you're working on something that could have affected it.

Why my hosting is suspended?
I bought 2 years hosting plan and i have 1 year and 8 months left and my account suspended.

Is this a joke?

domain: nexaze.com

Continue my hosting otherwise give me my refund and don't say i have to contact you through your website becoz ur website is dead like your hosting.

AV picked up malware on your site

For those asking - I am not sure if I will bring serverbox back to life. Old servers are still up and
