Thread: [Can I port forward my port using SoftEther VPN](#)

macnux - September 28, 2017, 5:26 pm

Hi,

My ISP has blocked port forwarding and I'm trying to use a VPN that supports that.
I'm trying SoftEther VPN, have any one tried SoftEther VPN port forwarding? how to do it?

Besides, I've tried port forwarding using unPnP. I've enabled UPnP on the router and I'm using dynu as DDNS and I've installed the dynu client and I've enabled unPnP on Windows by enabling network discovery. but nothing works.

Regards,

Have you tried setting up a listener? You need it so the port shows as open when you check it.

krashnopol - September 28, 2017, 5:54 pm

try phyber vpn. cheap and good.

NYANxCAT - September 28, 2017, 7:51 pm

I can give you port setup :) contact me

Try AirVPN, it doesn't log, it supports manual port forwarding, and even has a built in DDNS

I'm looking for a free solution whether it's a VPN or using UNPNP.

VPN's with PF will always cost money. UPNP if I'm not mistaking will only temporarily open the port for you, considering your ISP does not allow that it won't work. Could be mistaking on the first part though.

Ask them if they will, but if they don't feature it probably not.

macnux - September 29, 2017, 3:57 pm

what version of darkcomet supports this?
