Thread: [Age Of Empires Asian Dynasties](#)

raghavsood999 - September 29, 2017, 5:28 pm

My friend told me that i am able to use cheat engine and ollydbg to hack value like gold, food and coin in asian dynasties Multiplayer Online Games.

In single player you can do this simply by using cheat engine but online play you need a debugger.

The debugger will help you find the exact break point or weakness of the program. You need to perform some basic math , i think it's division or multiplication and you find a code like 0XC87 and then you input that in cheat engine to hack into the game address. That gives you the potential to edit what ever value you like on an online game. Some of you may say its not possible to hack in online mode.

It is, but you need to do lots of work.

You cant use cheat engine only on online game because it crashes. So you need debugger app. Can someone help me do this or tell me another way to hack online game value's not only on asian dynasties but elder scrolls online etc.. basicaly server side hacking. Which program could do that stuff except for cheat engine or art money or tedit
