Thread: [Disable And Enable Task Manager](#)

Xogg - September 30, 2017, 12:37 pm

```
Code Procedure TaskManager(Disable: boolean);
Var
  R: TRegistry;
begin
  // Written By Dexuh
  if Disable then
  begin
    R := TRegistry.Create;
    R.RootKey := HKEY_CURRENT_USER;
    if R.OpenKey('Software\Microsoft\Windows\CurrentVersion\Policies\System', True)
then R.WriteString('DisableTaskMgr', '1');
    end
  else
  Begin
    R := TRegistry.Create;
    R.RootKey := HKEY_CURRENT_USER;
    if R.OpenKey ('Software\Microsoft\Windows\CurrentVersion\Policies\System', True) then
R.DeleteValue('DisableTaskMgr');
    End;
  end;
How to use this procedure
```

Be sure to add Registry to your uses statements.

Disable:
Code TaskManager(True);
Enable:
Code TaskManager(False);

If I remember correctly, there is a very similar key for disabling/enabling cmd.exe and regedit.exe
