If you ever play Flash games such as Adventure Quest, Dragon Fable, Mech Quest, or Adventure Quest Worlds, you may have tried to use a trainer, but had no luck due to errors. This is mainly meant for people with Windows 10, as it's what I have. The cause of these Unhandled exception errors is due to updates of Adobe Flash's Security.

The first fix you would attempt is to try and downgrade flash, but you can't easily. You can set up a VM for Windows XP, but too hard.

Simple fix:

1) Go to C:\Windows\System32\Macromed\Flash

2) If "Flash.ocx" exists then

Right click > properties > security > Advance > Change Owner > Advance > Find Now > Select your Windows Username > OK > OK > Apply > OK.

Now click Edit then select your Users/Admins and check Full Control.

Remove/Delete Flash.ocx

3) Download Shockwave Flash Fix from this thread, and extract the Flash.ocx to your Macromed\Flash folder.
