Thread: [What payment methods are safe & secure to work with](#)

tra_extra - October 2, 2017, 5:46 am

Hi there,

I hacked some important email addresses and i want request for the money against those hacked passwords.

What payment methods are safe & secure to work with?

Is [BitCoin](#) ok for that?

Meaning of secure is : Payment's support area shouldn't answer or help Cyber Security team to track me.

What about [perfectmoney](#)?

NA Riven - October 2, 2017, 5:47 am

Lmaoo get outta here.

Ask them to meet irl Cyber Security cant do shit

4158996621556 - October 2, 2017, 5:48 am

yea u can go with bitcoin

perfectmoney uhhh not so much

my suggestion:

either request a check (bank)

or paypal (its untraceable)

Thanks,

Officer Doge

natedavid33 - October 2, 2017, 6:14 am

Bitcoin and other cryptocurrencies pride themselves on being virtually untraceable. They are commonly used in both legal and illegal terms for that purpose.

hey i hope you remember me ,

i defined sarcasm and watermark 4 times yesterday im a master definer

ok so:

untraceable =

something that can't be traced

Define sarcasm.

Anyway OP PP has a new feature to encrypt all payments if you send them you become 100% untracable. Enjoy

Thanks for the answers,

I know about encrypt all payments.

But if cyber security team send a message to that payment processor to see what did i do with the money and ask them about exchangers that i use what can i do about that?

Exchanger knows about my bank account because of reach the money i should send my bank account to it.

In this way they can find & shoot me!

Tell them you hacked emails. They will laugh and leave you alone.

Now we should talk about money laundry and find a good way to invisible ourselves.

jvez21 - October 5, 2017, 2:17 pm

My suggestion would be Bitcoin

saphunter - October 5, 2017, 3:26 pm

By my understanding would be Bitcoin would be safer

oRequiem - October 5, 2017, 8:08 pm

I'd just roll with bitcoin.
