Just tested this out and it works very well!

Huge vouch! I've seen many similar products on the forum that just simply don't work.

I'm glad to see that Maxim has developed a solid and working product

Let's say I make a new FB acc with a simple password. Since I don't trust anyone here I want you to hack it and provide me the password. I would make a new mail account and a new FB accout with let's say your nickname included, so you can trust me that it is a test. Are you in? This is the ultimate test for your FB hacker. The password will not be in english language. CAN YOU VOUCH FOR YOUR PRODUCT?

I know a Facebook URL of the target's account, and the @yahoo.com email address associated with the account. I do not have any passwords list .txt file. Will this product work based on the info that I have?

Yes it will. I provide a password list.

Review:

The program is fantastic at hacking in mass, super good.

There is very good support and Maxim is really helpful.

But... I wouldnt my self recommend it for hacking individual accounts, so far ive let it run through 5 different accounts with randomly generated passwords, it has cracked none of them yet. It hacks off of a password list so therefore it isnt that good at hacking individual accounts.

I would rate it 6/10
