Thread: [DeathByCaptcha NOW WITH ReCaptchaV2](#)

Vanderbilt - October 7, 2017, 12:38 am

<http://www.deathbycaptcha.com/user/api/newtokenrecaptcha>

Quote:What's "new reCAPTCHA by Token"?

They're new reCAPTCHA challenges that typically require the user to identify and click on certain images. They're not to be confused with traditional word/number reCAPTCHAs (those have no images).

For your convinience, we implemented support for New Recaptcha by Token API. If your software works with it, and supports minimal configuration, you should be able to decode captchas using Death By Captcha in no time.

Token Image API: Provided a site url and site key, the API returns a token that you will use to submit the form in the page with the reCaptcha challenge.

We also support solving token captchas through our 2captcha api. Check it out!

Pricing

For the time being, price is \$2.89/1K Token reCAPTCHA challenges correctly solved. You will not be billed for Token Images reported as incorrectly solved. Note that this pricing applies to new Token reCAPTCHA images only, so only customers using this specific API will be charged said rate.

I suggest coders that use these should make them with DBC access as it will make more sales!!!
