Thread: [I activated windows 10 by following this tutorial. Is My computer at risk?](#)

Tommm - October 8, 2017, 6:02 am

Hi all,

I recently installed windows 10 on my computer but it didnt activate as it said someone else was using the same code I was. I followed this tutorial to activate windows 10:

<https://www.youtube.com/watch?v=0SkRuRsLMxc>

Is my computer at risk of anything with the text I put into my command prompt?

Thanks if you could help.

Well I can't believe you fell for this trap...

It's stunning how one of the most popular tech tricks used by hackers all over the world still manages to catch people...

it's a pretty known trick (command prompt hijack 0.8.922b) and noone knew how to fix their computers once it was hijacked via this trick for a long time

but youre in luck since like 5 months ago microsoft released a patch which SHOULD resolve the problem

so first of all:

update all your windows drivers and install all windows updates

at that point it should be all pretty straight forward:

open windows 10 in safe mode and then using the notepad trick, reboot it into a-hiJCK mode at that point

open up your cmd prompt with ADMIN RIGHTS and then type:

ahijck [day you used the windows 10 code in the video in UNIX format] disable=1

reboot your pc normally

WAIT IM JUST KIDDING

YOU NEED TO DELETE THE NOTEPAD FILE FIRST IN SAFE MODE

ok now reboot ur pc normally

open up cmd again and type:

ahijck finalize=1

now in cmd type:

netstat

if you see 127.0.0.1 established you don't hvae anything to worry about

close all of your applications and things opened,

if there are still connections then it means you did something wrong and you didn't follow my steps

correctly

you should only see 127.0.0.1 connections and connections related to your ISP, nothing more nothing less

i hope i could help you :)

Windows 10 should give you an official Windows phone number in the activation screen. Once you've cleaned your computer, call them - just verify the number first to be sure.

It's against forum rules to discuss piracy.

Do a clean install and acquire a legit key.
