Thread: [Website admin panel finder :'\(... \(Experts Please don't ignore\)](#)

Kevin_1998 - October 9, 2017, 10:31 am

I have tried many options for website (it is http) admin panel finder like KatanaFramework , WebSploit and also the perl script (tried from youtube) . but not getting the exact admin panel . Every time I failed . But does anyone has got a better solution to this problem if yes please share it with me and help me !

It is possible to hide admin panel from getting searched . please clear my doubts . But I think that there is a way that I don't know .. So please help :)

Thank You !

Beladonis - October 9, 2017, 11:04 am

Yes it is possible to hide the login page, for example, you rename the login page from "login.php" to something like "login123qwerty.php", if it's not indexed or linked to any other page, no web spider will be able to find it.

Or a CMS or some kind of web-based management system is running on another service, on another port (like 2082 for cPanel, 10000 for webmin, 8443 for Plesk ...)

You can also use htaccess to prevent people to access the login page without a cookie, a referer or things like that.

Vulnerabilities like directory traversal and path disclosure can reveal informations and contents of the folders hosted on the server, but you have to be lucky as these vulnerabilities aren't too common. Or you can try registering an account on the same hosting service and see where the admin page is at, just in case it wasn't changed but it's in an unusual path.

Kevin_1998 - October 10, 2017, 10:08 am

So should I agree with that admin panel can't be found on some website ?

Please anyone who has experience with such stuff ... teach me if possible :|

Baud - October 10, 2017, 10:13 am

If it's well hidden and you don't have access to the server itself then yes, sometimes it can't be found. Your last chance would be using dir buster to brute force it but it could take ages and you could overload the server with requests.

There might not even be on. Some web sites use static site generators and get updated by uploading via ftp.

Kevin_1998 - October 11, 2017, 10:53 am

Okay Buddies , Thanks for reply :)

Mx. - October 11, 2017, 10:55 am

just try out acunetix, and just crawl the site for login pages.

NightmareJoker - October 11, 2017, 2:24 pm

Look for a crawler, which will get all url routes for you.

WPA2 - November 8, 2017, 6:32 pm

hint: look for logs scan with acunetix u will see www.site.com/Logs.txt or /error_log

NinjaLeaks - November 8, 2017, 6:34 pm

I released this --> <https://hackforums.net/showthread.php?tid=5505061> a bit ago, idk its open source you can mess with it a bit if you want :P

botxfive - November 12, 2017, 12:57 pm

there is much softwares and scripts google it bro

It've been a while since I saw a team INTRA member on here lol

Ramb0x - November 15, 2017, 10:39 am

I got admin finder coded in php if you got host i can upload it on.

lckoufc - November 21, 2017, 1:25 am

Have you tried dirbuster?

crystl blood - November 24, 2017, 1:10 am

just check robots.txt also if ur lucky site.com/robots.txt

raylex02 - May 5, 2018, 10:36 pm

Use acunetix to crawl or try this dork "site:site.com Admin Login" or site:site.com Login" or "site:site.com intitle: Login" etc
