Thread: [PRO PENTEST TOOL SIB PANEL \[email/phone/etc\]](#)

sibinupan0el - October 9, 2017, 5:41 pm

All screenshots will be provided in jabber. I do not have 50 posts on the forum.

SIB PANEL PENTEST TOOL

Renting/Buying the software you accept the agreement. Author is not responsible for your activity.

You agree to use the software only for checking your own sites.

Any other activity done with the use of the software is contrary to the license agreement and current US laws.

!!!SIB PANEL CAN'T BE SOLD OR LEASED WITHOUT MY PERMISSION!!!

First version(2013) --

>

>

LATEST UPDATE 5.2 (2017)

High quality support 1 month guarantee (enough to understand how everything works)

(In case of lost license it will cost you 60\$ to restore it in 2-3 days)

-Sites are cracked with the use of the software in order to download all of the databases(email:pass)(PIN) etc.

-AUTOMATED DUMP WITH THE USE OF SQLI INJECTION. The software uses vulnerabilities in MYSQL (php) much faster than other analogs! In case of MSSQL sink (asp, cfm) you can use sqlmap (built in the software). (blind sqli, sqlmap and havij level)

-The Software consists of scripts for the pentesting of databases through sql vulnerabilities on sites, using my own algorithms(not public solutions).

-The Software works best with selfwritten sites. Software isn't working with joomla wp dle and forums because of lack of sqli.

-Uses shells for the main functions.

-The software supports MSSQL using Sqlmap and mix mode.

-Union cracking solution added.

-!!The software targets at PHP/ASP/ASPX URLs!!.

-Advanced search of interesting columns added.

-MAIL+NAME+PHONE NUMBER Download support added.

-MAIL+PASS Download support added.

-Automated admin account search added.

-AUTOMATED Header analysis (looks for sqli injection)

-Checks referer -> checks useragent -> checks x-forwarder -> checks cookies

-Advanced settings mode (edit config in the root directory)

-HTTPS support added.

-Bug fixes.

-Many other stuff you don't even care about...

ADVICE[]:

Upload links made by using search engines + dorks (?php/?asp/?aspx)

LONG STORY SHORT:

- Built-in SQLmap
 - Easily access the databases
 - Speed
 - Automated pentesting and results downloading
 - Time-saving
 - User friendly interface
 - Automated search
 - !!The software targets at PHP/ASP/ASPX URLs!!.
 - Before buying the software find as many URLs as you can(example: dorks + A-Parser = URLs).
- You can use A-Parser or whatever you want instead.

INSTRUCTIONS:

1. Upload Links
2. Wait
3. LogIn
4. Download results in txt.
