Thread: [\[Tutorial\] The Best Injection Method Ever You Should To See \[New Method\]](#)

pishicat_Injector - October 11, 2017, 5:56 pm

HI ?

From a little while ago I saw Berry White needing help here

PHP Code

```
<?php
```

```
https://hackforums.net/showthread.php?tid=5734847
```

So this topic was created for him

•???? Target ????•

PHP Code

```
<?php
```

```
http://www.slobodnosrpski.com/index.php?jezik=sr&meni_link_id=20
```

Let's Get the column number by using Group By 100

PHP Code

```
<?php
```

```
http://www.slobodnosrpski.com/index.php?jezik=sr&meni_link_id=20 Group By 100-- -
```

i.imgur.com/78dlRhr.png

I get error Not Found , but when I delet Comment Out Query -- - from the end of the query I get normal loading page .

PHP Code

```
<?php
```

```
http://www.slobodnosrpski.com/index.php?jezik=sr&meni_link_id=20 Group By 100
```

i.imgur.com/7P1Df7c.png

So we have here error with white space after any number with using Group by 100x so you can bypassing this error by using one of this Comment Out Query.

PHP Code

```
<?php
```

```
%23
```

PHP Code

```
<?php
```

```
;%00
```

PHP Code

```
<?php
--%a0
```

SO Let's fix this error By using %23 ?

I notice when I use Order By 14 There Are Error

PHP Code

```
<?php
http://www.slobodnosrpski.com/index.php?jezik=sr&meni_link_id=20' Order By 14%23
```

i.imgur.com/UO9SCBx.png

And With Order By 13 There Are No Error

PHP Code

```
<?php
http://www.slobodnosrpski.com/index.php?jezik=sr&meni_link_id=20' Order By 13%23
```

i.imgur.com/stjiTfR.png

SO ? the column number is (13) columns ?

Let's Use Union Based

Notic: I will delete variable number and I will add @ just for fun

As you see there are error with using uni*on sel*ect

PHP Code

```
<?php
near '.modul_slot = '1' AND moduli.modul_status = '1' ' at line 13
```

This Error We Call New Line Error , Coz this line meaning is just order by x column of the url query, and this query continues to a new line, Ok Now we can't use -- Or %23 Cuz its same with --%0a

So What Can We Use To Bypassing This New Line Error ? , to bypassing this error We Can Use This two Comment Out Query.

PHP Code

```
<?php
%60 | It Mean Backtick ` |
```

Notic : The backtick can only be used to end a query when used as an alias`alias starts

PHP Code

```
<?php
;%00 | It Mean NUL Nullbyte (MySQL < 5.1) |
```

SO ?

Now We See Another Error Here

PHP Code

```
<?php
```

The used SELECT statements have a different number of columns

And This Error Meaning UNI`ONS (UNI`ON and UN`ION ALL) require that all the queries being UNION'd have :

- 1- The same number of columns in the SELECT clause
- 2- The column data type has to match at each position

First: Routed Query(double query)

I did all the steps Here but it did not work As you see.

Second : Using True with all column's as a multiple queries

When I using this method I Noticed there are a word 'Novosti' appear in the page As you See.

I think it's mean I can insert every (id) like Nulling/Positive Value that used in multiple queries, in some column number one by one in this site to get the Vuln Column .

Notic : I will Using New Solution here it's calling NULL/IF Method's.

OK, Let's Start To Do That

Now I Will Use NULL/IF Negative/positive Value Method's to get the column Vuln number in the page, but how to use that NULLIF Method ?

NULLIF Negative/positive Value Method's

First: the method of NULL/IF I will use here must be The positive part, Cuz positive part only can appear Vuln column Not Negative part as a other method .

Second: Method NULL/IF should start from the last column forward to the first column in the DataBase Columns.

Notic : I can't use positive NULL\IF in the same DataBase Column Twice, Cuz I have Rule that dealing with the situation here.

•???? Rule Of Negative/Positive NULL\IF value Using [Rule Belong To Team GHI] ????•

NULLIF Method should start from the last column forward to the first column one by one , And If a column has gained a positive value By using positive NULLIF Method , It never To Other columns acquire the same value at the same time.

Let's change positive NULL\IF value in column number (13) to Negative NULL\IF value

now I will use positive NULL\IF value in all column one by one Let's Start .

Notic : If you have any notic in Rule Of Negative/Positive NULL\IF value please keep it to your self.

Hope You Love My Work Here

Regards

Pishicat_Injector GHI

Berry White - October 11, 2017, 8:10 pm

Lol man, u shouldnt delete tutorial, u should just remove site name, i dont know why u complicate things?

Thank you for your help, i am grateful, but its just little bit stupid to set real site name, isnt it ?

Quote:so the subject must be deleted in full and Respect the desire of the owner of the subject that request the help.

Then why u didnt delete it from fb page? Cmon man, i dont see the point of being mad? I Just dont want to site be defaced thats all,and we all know that it will be defaced if it is in tutorial...

hunters - October 11, 2017, 8:47 pm

Awesome work dude. Really fantastic.

pishicat_Injector - October 11, 2017, 9:05 pm

Update my Tutorial just now

Berry White - October 11, 2017, 9:20 pm

(Oct 11, 2017 09:05 PM)pishicat_Injector Wrote: [\[CITE\]](#) thx for that

and thx for that's too my friend

and about that

who say that is deleted from FB too

BTW you site appear in then more a 5 image so what I do about that I deleted all for that too

And I think mr JaNuS18 help you and you not need to my help so don't worry about your site it's safe now

Regards my brother ?

Listen man, i dont understand u very well, lets start from begginng, so:

First of all, i didnt know that u will set real website name.

Second, If u set real website name someone will deface it 100%, skiddies are everywhere my friend, and then u dont have use of putting real website name...

Third, It was on facebook until i didnt say that it is on facebook page, then u deleted it.

Fourth, Quote: And I think mr JaNuS18 help you and you not need to my help so don't worry about your site it's safe now

really man? it doesnt matter who helps me, the title name is for masters in sqli...

And last thing, i really appreciate all u done here,i really do, but cmon, if u really wanted to help me, then u should message me on fb and help me, and if u want to write tutorial, then write with other website name as u said that u have some websites with same injection method...

And i dont want this website to be defaced,because it is of friend of mine...

PS: No hard feelings buddy?

Younis Khan - October 11, 2017, 9:30 pm

hmm that sucks :| thanks for ur effort of making it though...is it possible for u to send me or no?

pishicat_Injector - October 11, 2017, 10:08 pm

(Oct 11, 2017 08:47 PM)hunters Wrote: [\[CITE\]](#) Awesome work dude. Really fantastic.

thx my frind ?

(Oct 11, 2017 09:30 PM)Maaz Wrote: [\[CITE\]](#) hmm that sucks :| thanks for ur effort of making it though...is it possible for u to send me or no?

aha as you say it's sucks

I'd never even heard of "NULLIF" until now.

I am fine with it, but i am not fine with putting in tutorial website i asked for help, i mean cmon..

Omg, u really did this...

Why just dont change website name, why u are that idiotic? I dont get u + u said u wrote this tutorial for me xD and now publishing it xDD

InjectorBoy, stop with that shittt please, why acting like moron ?

I ask for help, and that website is used for tutorial,great !!

I shouldnt ask u at the first place, fucking loser, trying to copy JaNus,benzi and other masters, but u are just idiot who have about 10 personalities, that is so sad phishicat injector, or should i say black roas? or should i say Injector boy ?or what?

•^v^-[bLacKn3x]-^v^• - October 12, 2017, 3:58 am

Hi what about simply insert --> 1 in column number? this makes the datatype boolean True too :)

thats easier to handle if it comes to waf or something.

Regards

JaNuS18 - October 12, 2017, 5:55 am

Than he couldn't write so long text as new priv8 tutorial ?

tutorial start

Fact is: column 3 is booealan value. It can have value true or false(1/0).If value in column #3 is true (or 1), data from database in column #4 is visible. If value is false, it isn't visible.

tutorial end

That logic for column #3 and #4 is valid in this web page ONLY - not a general logic for all sites, so such nullif tutorial is pointless ?.

[New Method] he said: ??

[Rule Belong To Team GHI] ??

The Best Injection Method Ever ??

OMG ??? He invented SQL... ?

Berry White - October 12, 2017, 6:27 am

Thanks for explanation, i couldn't figure out why this query works... so by simply adding 'true' to columns, we can get vulnerable column

JaNuS18 - October 12, 2017, 7:33 am

(Oct 12, 2017 06:27 AM)Berry White Wrote: [\[CITE\]](#) Thanks for explanation, i couldn't figure out why this query works... so by simply adding 'true' to columns, we can get vulnerable column

Yes, you need true (or value 1) JUST in column #3. This is valid ONLY for that specific site, where display of column #4 is related to state of value in column #3

That NULLIF() "new priv8 method by pishicat_injector" is totally obsolete, actually a nonsense which works just by accident.

MySQL NULLIF(value1, value2) returns NULL when the first parameter is equal to the second parameter. Otherwise, it returns the first parameter.

So that "glorified new super duper method" ? doesn't work for that site if you use NULLIF(2,1), NULLIF(3,2), NULLIF(X,Y)... It works just in one and only case when first parameter (X) is 1 and other parameter Y is <> 1 --> so function result is 1.

But we don't need some extra function if we can put simple 1 (means TRUE) to column #3. !!!! ???

P.S:

pishicat_injector here is a suggestion for few "new glorified super duper priv8 methods" and tutorials by you ©:

#1

PHP Code

<?php

FIND_IN_SET(0x61, 0x612c622c63)

Put in column #3 and it will work. ? Because result of find_in_set will be 1 (means TRUE) again ?

#2

PHP Code

<?php

INSTR(0x6a616e7573, 0x6a616e)

Put in column #3 and it will work. ? - "another new glorified super duper priv8 method"

#3

PHP Code

<?php
length(0x6a)
Put in column #3 and it will work. ? - "another new glorified super duper priv8 method"

#4
PHP Code
<?php
locate(0x6a,0x6a)
Put in column #3 and it will work. ? - "another new glorified super duper priv8 method"

#5
PHP Code
<?php
strcmp(0x6b,0x6a)
Put in column #3 and it will work. ? - "another new glorified super duper priv8 method"

OMG ??? He invented SQL...
I love YOU ?
put 1 in col 13 and now put null or 0 or false in col 5 now there are some vul columns :D but for inject you should keep trying and "working hard"?? !
or you can put 4 in col3 and some thing o col5 to see new different !!!
this is easy ,but there are more advance methods that will do it in all of targets !!!

but it's nice tut from pishicat_injector!?
(Oct 12, 2017 07:33 AM)JaNuS18 Wrote: [\[CITE\]](#) P.S:

But we don't need some extra function if we can put simple 1 (means TRUE) to column #3. ? Thanks for clearing this out to me mate, but is there anything in injection output that says when we use this? Like "The used SELECT statements have a different number of columns" Output?

JaNuS18 - October 12, 2017, 1:53 pm

(Oct 12, 2017 01:39 PM)Berry White Wrote: [\[CITE\]](#) Thanks for clearing this out to me mate, but is there anything in injection output that says when we use this? ... I answered you in my second sentence in text you quoted.

Required true in column #3, related to show column #4 is specific ONLY to this site, so tutorial about it is obsolete. Especially using some fancy "priv8" ? function just to put value 1 in column #3. Which makes column #4 visible.

There are many sites, where we have boolean field type and value of it is not required to be true or vulnerable column is not visible. You just need to have same columns types on all positions like in original query. Or UNION injection won't work.

Berry White - October 12, 2017, 2:14 pm

P.S.

My syntax was later removed by request as it is used in a challenge
I thx you say to me that later are you see your solution here ? Curse

and I thx you say to me you All connections are cut off, so way I see you in all my Tut ,You are really very bad I don't love to see you in my Tut as you say to me befor about All connections are cut off, between us Be a man and keep your words ?

c0sm1k - October 13, 2017, 3:17 am

This was a fun thread. I like to see different ways a site could be injected. Once I had posted a challenge on another forum and someone made a youtube video of the solution 1 day later. This was good for me though because it was solved in a different way i had never thought of. I am grateful to see everyones methods ?

JaNuS18 - October 13, 2017, 1:35 pm

(Oct 12, 2017 10:51 PM)pishicat_Injector Wrote: [\[CITE\]](#) You are really very bad I don't love to see you in my Tut ...

Yes I am "bad" because I am telling you your "priv8 tutorials" are full of errors and nonsense.

To make me less bad here is a free review of your The Best Injection Method Ever You Should To See:

#1

If you want to write tutorials you should know SQL first, at least you should read official SQL tutorials so you won't "sell" statements like on picture bellow:

Nullif doesn't return positive/negative values. So you are teaching people nonsense. Don't "invent" wrong new methods and don't explain functions wrong.

Correct explanation for nullif is:

MySQL NULLIF(param1, param2) returns NULL when the first parameter is equal to the second parameter. Otherwise, it returns the first parameter.

Where do you see positive or negative value as a possible result? For example: what is negative value of nullif(4,4)? ?

#2 Next nonsense on picture bellow:

So you invented "new line error" OMG ??? And your explanation of it is not understandable even to yourself... When you inject your code you ruin original query (or other queries which use that parameter) so such errors are normal and you can simply skip them. You can inject there even if that error is written on web page...

#3 Next nonsense on picture bellow:

Close your injection properly with %23 (and don't use %60) and that error is gone. So because you did it wrong way you continue your tutorial with routed query. ? Routed query there is NOT needed as you can inject it without it.

#4 Next nonsense in your tutorial:

Nullif can't be positive/negative! Wrong use of nullif can belong to GHI team ? Nobody want to take you that from you. Last sentence on picture is a joke. It is totally same if you check for boolean column from first or from last column. Direction is not important. But you even don't know you are testing for boolean values in each column as you are playing with nullif.

If you add title of your tutorial like The Best Injection Method Ever You Should To See [New Method] then I won't look away not saying anything to such false marketing. ? Its real value is practically zero.

I totally agree with this comment:

(Oct 12, 2017 08:17 AM)LD_PRELOAD Wrote: [\[CITE\]](#) The tutorial is borderline retarded. Just a different way of ending the injection. Absolutely no new method on the table, what a waste of a thread.

Beside wrong explanations here is a list of problems in this "tutorial": nullif function is obsolete as you could add simple 1 in column #3

you closed your injection wrong way with %60 so you start experimenting with routed query. Use %23 and all that wouldn't be needed.

in whole tutorial you didn't explain why value 1 should be there in column #3 !!!

if you want to impress us with using some function to put value 1 in some column, I explained you at least 5 different functions for same task (FIND_IN_SET, INSTR, LENGTH, LOCATE, STRCMP...). So why only nullif is new/best ever. ? All mentioned functions are obsolete for your target URL, so don't use them just to make simple things complicated.

your so called "method" is totally useless, as same effect you get by putting value 1 or true to column #3. But you can't write fancy tutorial with just once sentence: put 1 in column #3. You need to add some functions, routed query, wrong closing ... to make your "priv8" and "new" tutorial more dramatic and HQ ?

nullif is not new. It exists in MySQL tutorials over 20 years.

your "new" nullif won't work if used nullif(2,1),nullif(3,2) nullif(5,2)... but you didn't say why. It will work just for nullif(x,y) where x=1 and y<>1 Because we need value 1 (or True) in column #3 to make column #4 visible.

your tutorials can be used ONLY for that specific site, as only there display of column #4 is based on value of column #3. So what is the purpose of such "best ever" method if it works just in that site ?

If I don't communicate with you by PM any more it is because you are multi account and plagiarator, you stole my text, you are stealing text from others for your "priv8" tutorials. No personal communication with you doesn't mean I won't comment your "priv8", "best ever", "new" tutorials. Every time you will teach other people nonsense, I will comment.

So dear InjectorBoy alias pishicat_injector alias BlackRoas start writing correct tutorials ? (with references where you should mention them) and I won't comment for sure ?

I wish you good luck with that ?

pishicat_Injector - October 13, 2017, 2:15 pm

Thank you for understanding these things ?

here in this section two member Each time a topic is added by me They comment negatively

in my Tut I Use

PHP Code

```
<?php
```

```
And point(53,12)
```

PHP Code

```
<?php
```

```
And MOD(29,9)
```

PHP Code

```
<?php
```

```
%26%26 MOD(29,9) ? && Logical AND. Returns 0 if either argument is 0 or
```

```
NULL otherwise returns 1.
```

and other method , No one used this function to bypassing the WAF befor me and added in public Tut in all internet Tut ?

I don't say this function it's priv8 but I say my try to bypassing the waf by this function it's the priv8 .

Many members were very dissatisfied with the publication of these issues on the public, They told me to stop publishing these issues because you spoil our secret knowledge ,
Like Iranian terrorism r3dcat from ashiyane.org

And I say to all this member I will share many priv8 method like this ?

and about member his name is JaNuS18 he attack on me in all my Tut see that by your self, and I say to him I share my knowlege for free to all member here in SQL Section In HF and you I never see to you one Tut you learn member here from your knowlege , so I say to him ' I prefer from you many times ' and Go To H... ?

Notic : you in my Buddy List I love to work with you ?

Regards ?

Sorry I can't see your post to reply to you Cuz You in my Ignore List ?

I can say at least for me: he asked many different questions by PM. I am quite sure he asked different persons. When someone is asking 10 questions per day, it might become annoying. So he asked from different accounts.

That way he collected "his" knowledge for "his" priv8 methods ?

Berry White - October 16, 2017, 4:24 am

(Oct 16, 2017 04:17 AM)JaNuS18 Wrote: [\[CITE\]](#) I can say at least for me: he asked many different questions by PM. I am quite sure he asked different persons. When someone is asking 10 questions per day, it might become annoying. So he asked form different accounts.

That way he collected "his" knowledge for "his" priv8 methods ?

Lol, that is kinda rude and immoral af

PS: sorry if i was being annoying, just needed help..

n4xiii - October 16, 2017, 5:48 am

this is something new , i just looked at
i might try this aswell , when i get good skills in sqli
thanks for share

(Oct 16, 2017 12:48 AM)•^v^-[bLacKn3x]-^v^• Wrote: [\[CITE\]](#) THIS MADE MY DAY ???????????

lol you think there are only 5 injectors around the world ???
This functions are very public...even to bypass WAF!...

You think no one use that because there is no Tutorial? Can you handle your life without web-tutorials?

You should stop injecting pakistani websites with shitty WAF ;)

regards

no my friend I don't mean that, I mean No one likes to share such special knowledge on the public so I do that first , and when I share this method with r3dcat he say to me don't share this method in public , so Everyone monopolizes their own knowledge and don't love to learn other by share like this method Lol ?

Regards

Regardswhat ???

I JUST SAY TO YOU THAT YOU SHOULD WORK HARD TO LEARN !! AND WHEN YOU DO IT YOU WILL understand why i said it...
i say it for you to learn being pro...

I have so priv and not priv methods that never need to this...
when priv method is saying , it's no priv(just loving janus mr..)

I and many persons solved challenges by 200 methods but no one doesn't said any thing ...

you have been said some thing and every day you are happy ?????????

I NEVER LIKE TO hear some things that includes r3dc4t...
you have baby boy becoz repeat this..
it means you have low IQ ...

NOW I WILL SEND REPLY TO YOUR PM'S that includes my name !

pishicat_Injector - October 16, 2017, 1:57 pm

Sorry I cannot answer you Cuz you are in my ignore list

What ? when I start Learn I start from your forums ashiyane.org

at first all method I know it's normal method to me , but in your forums I was deceived by Issue priv8 Cuz I learned this from you and from other Iranian Members

Not for just loving janus mr. O liar

Here My Prove

and other Tut , and you say to me too much for some solution it's priv8 no one know except you and your team, and you never share with me Cuz that

I learned this priv8 method word from you and when I come here to make priv8 Tut , you know what happen from mr janus ?

Damn on this erroneous learning I learned from you and your forums [I remmber you say to me the HF forums it's fake forums and fake member and your forums it the best forums ever, and member of HF stealing from your forums the method]

No Thing Is Call Priv8 In SQLI O liar ???

pishicat - October 18, 2017, 11:08 pm

I just said "love janus" becoz i don't want you be angry from this word : 'priv8'
just this..
good luck

Inject0r Killer - October 22, 2017, 8:07 pm

At That Time When A Row Started Between Me And Sir BlackRoas . EveryOne Was against me . I mean no one believed me . some people asked me to leave HF coz of that ROW ??? . and now those people are taking part in this DISCUSSION ? (As aliases[BLACKROAS/INJECTORBOY/PISHICAT_INJECTOR] are different . person is same) . But I wont say that (To leave or stay it all depends on them) . Not Related To Any Of You Personally ! ?

PS :

I still want to know is PISHICAT and PISHICAT_INJECTOR are same person or what ? ? ? ?

Berry White - October 22, 2017, 8:45 pm

Oh, come on pishicat_injector ??? All commands we are using are part of MySQL tutorials, free accessible on internet. Nothing is YOURS!!! We are using those commands daily, but nobody (except you) is telling others it is "priv8" method.

SQL didn't start with you, so stop pretending you invented SQL. ?

Do you know what syntax I am using? You don't. So how can you say your method is private without knowing what others are using? It is plain simple logic: as we don't know what syntax others are using we can't say something is private. Others can use same commands as you, except they didn't write tutorials about it. So stop your marketing about those so called "priv8" methods. So far you didn't "invent" ANY priv8 method which skilled injectors didn't use before. And if you are such "haxor l33t priv8 injector" why did you need few different accounts (!!!) to keep asking questions benzi, me and others... ?

Hi how are you sir JaNuS18

I don't mean about priv8 method I invented it no sir , I mean I used some method to bypass some waf by method no one share as a Tutorial Befor so it's private

Cuz I made many challenge in FB and I found no one know about this method I use befor so I called priv8.

and that not mean other injector like you and benzi and r3dcat etc not know about this method , that's wrong I know many master know about this method but they didn't share this method befor in public , and my master r3dcat say to me befor keep this method you know private Cuz other can use to inject our site etc..

Regards

and can I ask you sir, is my tutorials I made here You see it is not useful to member here in sql section, Regardless of the names (priv8) I have call

Regards

JaNuS18 - October 25, 2017, 2:25 pm

Quote:and can I ask you sir, is my tutorials I made here You see it is not useful to member here in sql section

Yes, they are useful, just don't use your favorite word "priv8" ? , give credits where you are using stuff from others and make sure everything you write is 100% correct (by checking official explanation in MySQL tutorials).

Nobody will complain in such case...

pishicat_Injector - October 25, 2017, 4:36 pm

Do You Think people didnt solve your challenges coz they didnt know the methods ? or should I call "PRIV8 METHODS" ? Dont Live In A Fool's Paradise . Many People Didnt Solve Those Challenges Because They Didnt Want to Interact With Person Like you whose all METHODS are PRIV8 . So Dont Think They Are Private Methods . Everyone know them ?

<https://imgur.com/a/h54YA>

And do you really think people would just believe me if I say IB/BlackRoas/Pishicat_INjector are same person ? ?

Do you think they are fool enough to believe someone words without any proof . ?

Thats another thing that i have proofs ? which can prove BlackRoas/Pishicat_injector and IB are same but i wont share them ? .

I am not concerned with it ? . but i want to say people have their own eyes,their own ears and their own minds . they can see,hear and understand everything . so blaming me wont be useful . just try to change yourself ! and as you are saying "story to multi account" . for your kind information . You created and started the story . i just ended it by revealing reality !
