Thread: [\[Tutorial\] For everyone asking to hack a a social media account](#)

cephregada - October 12, 2017, 11:49 am

This tutorial is not guaranteed to work on every email or social media account but it's a starting place

(Step 1) Understand what you are dealing with

Nowadays, gaining unauthorized access to accounts (Facebook, hotmail,gmail,snapchat,instagram etc...) is hugely based on three attack vectors

1- Social Engineering: Manipulating your target to give out information about their password or their reset options (place they where born, first dog's name, mother's name etc..) or gathering such information from the open web.

2- Malware delivery: It's when you try to deliver a malware to the target through Social Engineering or exploiting a vulnerability on their devices to deliver your malware that in place gets you back password, keylogs etc...

3- Lack of knowledge from the target: This is the third technique used and what will be the base of this tutorial.

What people usually do nowadays is to create a social media account, let's take Facebook as an example, connect that Facebook to an email address and start posting cat's pictures.

Usually people tend to forget about the "email" part. People consider the "email account" is taken for granted and is only a mean to get the social media account, in this case Facebook.

This is a common mistake you see in most of the hacking done on Facebook, let me explain further.

(Step 2) Reversing

Let's say you have a Facebook account of someone that has a username "xxxxX"

Go to the main page of Facebook and press "Forgot Account?", it will take you to the "Find Your Account" page with a text box. Enter in that text box the username and a page will appear stating what "reset" options you have to change the password.

Take a look at the email field it will be something filled with asterisks "x*****x@service.com"

You can verify that the email you are guessing is correct by going into the "Forgot Account?" page and entering the email instead of the username, it should show you the same profile you are targeting.

Try to guess the email that is behind the asterisks based on the information you know about your target or the information you acquired by social engineering.

(Step 3) Gaining Access

After guessing the correct email, head to the service, let's take an example of hotmail

Head to the website and try to login with the email you guessed earlier with any password. If you are lucky enough, the page will get back to you with an answer that says "this account doesn't exist"

This happens when the user creates an email and doesn't use it much often so it get deleted by hotmail due to inactivity.

From here you can signup with the hotmail you guessed and you will have the email of your target with you. Then you can access facebook and send a reset to the hotmail you created and now you have access to facebook.

NOTE: There are many factors that will stand in your way sometimes, 2 factor verification is one of them or the sudden change in IP address will lock the account of the facebook you are accessing so be careful when doing so.

This method can be applied to any social media account because 99% of services are based on emails

Stay safe and don't get yourself into trouble because unauthorized access is illegal, this is for educational purposes only.

The.Businessman - October 12, 2017, 12:01 pm

Great Tutorial. Thanks. Really appreciate it

cephregada - October 12, 2017, 12:03 pm

Welcome, there are also other techniques like the verify with friends or to verify the names of friends you see in pictures but haven't seen facebook asking for those in a while

Noceur - October 12, 2017, 12:09 pm

this is a very detailed tutorial.
thank you so much! :)

thank you so much! :)

You are welcome, tried to do my best explaining why this kind of "vulnerability" happens before talking about the technique directly, hope it will be useful for everyone who doesn't know it

Cain_ - October 12, 2017, 12:27 pm

Well through guide OP. This can used in many ways besides game hacks. People have to use the brain power and create their own twist.

cephregada - October 12, 2017, 12:34 pm

Thank you. That is exactly what i was trying to say, hacking is a use of brain power and everyone can do it without asking someone else to do it.

You can apply this approach to anything that is out there

kissmyassbro - October 12, 2017, 12:54 pm

thank OP for the idea. very good method for victims who doesnt care about their email security

cephregada - October 12, 2017, 12:58 pm

Welcome, actually it's not about caring, it's about people taking emails as granted

You sign up to an email

You use that email to sign up on Facebook

You have a happy life

This is where the hackers abuse the lack of knowledge that nothing on the internet is taken for granted

Stelikas - October 12, 2017, 2:24 pm

The person might be using his mobile number instead of his e-mail to verify, in this case it's impossible. Also this is a really specific way and you must be REALLY lucky for it to work. Good tutorial tho.

Greg8Tacos - October 16, 2017, 4:00 am

Good shit. Thanks for the share.

cephregada - October 16, 2017, 10:22 am

Dunno what you are considering it, good or shit lol , you are welcome

mariasimmons99 - October 16, 2017, 12:05 pm

Nice, i hope this will work, thanks a lot

arvi - October 16, 2017, 2:26 pm

very nice tutorial thank you very much

keep it up

bobbylee945 - October 17, 2017, 3:17 am

Sounds interesting, ill try this

cephregada - October 17, 2017, 12:16 pm

Welcome guys, just don't do malicious things with this technique, use it to learn and protect yourself

davocado - October 19, 2017, 11:44 am

really neat tutorial.

thanks for posting!! :)

Mish z - October 24, 2017, 11:51 am

I need help like seriously

My fiancée I'm sure as hell that she cheats on me but there's no evidence i could find

I love her soo much but I can't keep playing dumb and act like I don't know

For anyone who have sympathy i need help getting into her twitter account .. i know i sound pathetic but what can i do .. she broke my heart many times but i need this last evidence so i could leave her and end this unhealthy relationship and get my closure.. anyone who could help just contact me

Thank you

hacker 1 - *October 24, 2017, 7:18 pm*

thnxx bro for this tut thnxx
