Then please act like mature person

Asking from one account people to help you when you dont know and when they help you, then on second account you introduce yourself as a master sql injector who is trying to help people and make tutorials about previous stuff you learned, why ? Is that for reputation? Or your need for attention? Or what? What is your motivation for something like that?

Its not a shame if you dont know and then learn and then write tutorials, shame is what are you doing...And thats why most of the people dont like you, and because you lie a lot!!! But i guess that comes with multiple personalities

PS: i dont say that you are bad injector
