Thread: [Why can't uBlock origin block the HF Logo in Block Element?](#)

lwrist - October 13, 2017, 9:27 am

I want to do it so I don't have it showing everywhere I go. I have a privacy screen guard, but it'd be nice to have the HF logo blocked.

<http://prntscr.com/gx0o5v>

Every time I block it, a refresh will reload the logo.

Hm you could just use a different theme with greasemonkey if it bothers you that much
I use +mK's black classic theme

Cammy - October 13, 2017, 9:29 am

Can't u just block the div class it's contained in

It worked fine for me, here's my config.

```
||hackforums.net/images/logo-hf.png$image
```

```

I'll give this a shot in the dashboard. Bless

EDIT - It worked, it was the \$image
