Thread: [Visual Basic Studio is trash](#)

UserUser123123 - October 13, 2017, 7:59 pm

i have problems with Visual Basic studio, what are some other compilers?

fxbghacker - October 13, 2017, 9:23 pm

i use visual studio express, works fine for me. you could try sharpdevelop,
<http://www.icsharpcode.net>

woms - October 14, 2017, 3:33 am

What's wrong with Visual "Basic" Studio? It's really fucking great.
And it's not just a compiler, it's a full-featured IDE.

Harvey Specter. - October 15, 2017, 6:50 pm

I mean, I think it's amazing, it has everything you'd need and more, but I do hate how sluggish it is, if I am not creating a GUI application Rider or MonoDevelop would defiantly be my first choice, I love the GUI designer, a big reason I keep using it.

Try any of these if you really can't stand VS: MonoDevelop
SharpDevelop
* Rider

Hornbuckle - October 15, 2017, 9:24 pm

Before throwing out Visual Studio consider downgrading to an older version. I use Visual Studio 2013 and it hasnt caused me any problems.

0xDEAD10CC - October 16, 2017, 9:19 am

Downgrading is a very silly idea. I don't know what Visual Basic Studio is, but Visual Studio is a great IDE. If you don't want that then switch over to JetBrains Rider, or Visual Studio Code. Why anyone would choose MonoDevelop in this day and age is beyond me too.

I think the problems you are having with VS is related to PEBKAC...

gigajew - October 16, 2017, 5:33 pm

MonoDevelop is a horrible alternative, you're better off writing stuff in Notepad++ and compiling using commandline mono (mcs) or .net csc (that's what I do when I write quick stuff)

Cypical - October 16, 2017, 5:47 pm

Your far better of just writing byte by byte really, it gives you a feeling of connection to your software and if learnt well can prove to be extremely useful.

I just looked it up. It is in my dictionary now.

kevy42 - *October 18, 2017, 11:01 am*

lets see here, visual. basic and than studio?, u wot m8?
