Thread: [How to make vbs to exe via IExpress ???](#)

podgoric892 - October 14, 2017, 8:40 am

Hello, can someone explain me please:

How to make vbs to exe via IExpress ???

i found tutorial on microsoft.

but that make me confused:

On the Install Program to Launch page, in the Install Program box, type
c:\windows\system32\cscript.exe "yourVBS.VBS" OR c:\windows\system32\wscript.exe
"yourVBS.VBS" Leave the Post Install Command box BLANK.

can someone explain me correct What mean that with "yourvbs.vbs" ?
how to make and bind with any program vbs file.

how to make and bind with any program vbs file.

"IExpress, a component of Windows 2000 and later, is used to create self-extracting packages from a set of files", it doesn't create an actual vbs

"VBScript is an Active Scripting language developed by Microsoft that is modeled on Visual Basic", so you have to make your own vbs

Then you use the IExpress to bind any program with your VBS

TheWarOwl - October 14, 2017, 9:24 am

You can't compile vbs to an exe, you can program and compile in another language that will drop

and execute vbs or use some library to execute vbs in memory.
