Thread: [VB.NET Not Sure Where to go Next \(Finished Guide\)](#)

Effexion - October 19, 2017, 1:22 am

So, I finished my beginner's guide on Home & Learn for VB.NET. The guide set me up with the fundamentals and I know know basics such as functions, subs, loops, arrays, 2D arrays, string manipulation and a few other things. However, I didn't learn anything about interacting with websites (which is where I want to go next).

I have followed a few tutorials like Teachmecomputer's web login video but struggling to find a next level course I can really get stuck into.

Can anyone advise?

Zero_Luffy - October 19, 2017, 6:15 am

Honestly ,
i would advise you to take that course
i cant post the link but it Visual basic courses on U D E M Y

Ninja - October 19, 2017, 8:15 am

Use the HttpClient object to interact with websites. It is well documented on MSDN.

After you feel familiar with the .NET libraries, I would move on to C# (it will help you to move on to C++ or java if you'd ever need to for a job)

CachelsAFag - October 20, 2017, 7:23 am

You should probably research System.Net.Webclient

RiperFish - October 20, 2017, 7:57 am

i suggest you to get into sockets.
