Thread: [Best FUD Android RAT?](#)

Blitzkrieg_ - October 19, 2017, 1:15 pm

Hey guys,

Do you know which Android RAT would be the best for stealthy control of your clients?

I'm planning on having only one client, so it needs to be very stable, as this sole client is of crucial importance to me.

It needs to be stealthy, FUD and require as little permissions as possible on installation.

Client's phone is Samsung Galaxy S8.

Price is irrelevant here, as long as the tool is fully functional.

Not a reply I was looking for honestly.

As I specified some details I was hoping for a more engaged reply.

So in other words you want the answer spoon fed, even though I linked a forum where your question has been answered plenty of times?

HQ.

HQ.

It's been answered for mass spreading mostly.

I'm willing to pay thousands of dollars if it's fully functional and meets my standards, that's the difference lol
