Thread: [Scanned 60% of the Internet for port 22, results!](#)

Carbanak - October 20, 2017, 5:10 am

I've performed a mass scan of the Internet for IP addresses that have port 22 open. The reason I only scanned 60% of the Internet was due to the fact I was getting quite a few abuse reports from my VPS provider. I've grep and sorted the text file just to have IP addresses.

So you can parse this data into any brute forcing tool you wish and enjoy the spoils.

You actually think you scanned 60% of the internet?

mrjammy - October 20, 2017, 5:20 am

A normal world scan on port 22 is about 250-300mb ish

PHP Code

```
<?php
```

```
masscan 0.0.0.0/0 -p22 --max-rate 100000
```

<https://github.com/robertdavidgraham/masscan>

That's actually quite astonishing, TIL.

Thanks man

Thanks man
No problem, if anything thank the creator of masscan.

EGoyard - October 20, 2017, 9:39 am

Dude. This is crazy af to me that you scanned 60 p of the internet. Almost can't wrap my head around the fact that the link you shared claims it can scan the internet in under 6 minutes moving 10 million packets per second. Awesome..

Elitas - October 20, 2017, 9:43 am

The question is now: Can you try the default passwords on all their ports and make a list?

Thaaat would be useful, lol.

I might just do that. ?

notluther - October 20, 2017, 12:15 pm

Ahh masscan, lovely tool. This is an interesting share, though I wonder how many people here know what to do with this kind of information?

A lot. Masscan isn't just for the internet, but intranets as well. It's incredibly useful for red team ops; I haven't run into anyone who doesn't use it on red team. Hell, some blue team ops use it.

I was more referring to the fact that this kind of thread was posted in the 'Beginner Hacking' section. I'm making a joke, of course, this subforum probably gets most of the traffic in the Hacking section of the site, so it makes sense to post here.

I'm starting to prefer using this tool over nmap, just for port discovery I think it beats nmap hands down, of course for reconicence nmap is to tool to use.

MexicanSwag1423 - October 20, 2017, 3:33 pm

wow good job! I wish to be like that one day

Right. I use both, but namely for the reasons you describe. Sometimes I'll use NMAP in place of masscan if I'm bored.

Carbanak - *October 21, 2017, 7:19 am*

Would anyone be intrested in the IP ranges that submitted abuse reports to my VPS provider?
