Thread: [Shared Hosting 1\\$ || Linux SSD VPS 5\\$ || Cheapest in Market || 100% Uptime || HostOjo](#)

MrBox - October 23, 2017, 5:53 am

We want to bring simplicity and freshness to how you make use of the internet. We want you to have your website up and running within minutes or even seconds, not hours or days. By constantly researching and implementing more flexibility into our systems, our end users benefit from applications that anyone can use. Our website building software, blogging applications, email, and even our ecommerce applications can be mastered quickly.

Our Plans -

In your thread design, it looks like you've stolen the plan boxes from ShockHosting. Any reason why?

MrBox - October 23, 2017, 11:02 am

Thread design is not made be me but I will surely take your opinion in consideration.
And will notify my designer to change it asap.
Thanks For telling it.

Firelor D - October 27, 2017, 11:55 pm

Good hosting provider , hosted my website on boxhoster , will again shift to MrBox Services.

Toasties - October 28, 2017, 12:01 am

Do we get root on the Linux boxes.

Does it also have a external facing IP address?

MrBox - October 28, 2017, 11:42 am

Does it also have a external facing IP address?Yes you get root on linux boxes,
and correct me if I am wrong external IPS means extra Ips along with main IP yes we have option
to do that also.
Regards

aboyio - October 28, 2017, 12:37 pm

LMAO...this is really annoying

Autist - October 28, 2017, 12:45 pm

(Oct 28, 2017 12:35 PM)MrBox Wrote: [\[CITE\]](#) Virustotal also detected virus is those PNG file.
Go get yourself some brain first, you are questioning my malware protection after seeing same
result on virus total.
Go see it again and think twice.
ever heard of false flags?
check the PNG file if its really malware

MrBox - October 28, 2017, 12:48 pm

Then what was my fault there for getting negged and thrashing sales every cpanel will detect that
file as a virus.
There is now way to disable cpanel basic protection.

Complete shit, the hosting is cheap which is good an all but their malware detection system is ass,
it detected .css and .js files as fucking malware
<https://gyazo.com/1b8ec1af50be9cff1e2eec7120cf5b96>

Here are the panel files: <https://www.sendspace.com/file/tqnkfk>

This is not sales trashing, this is my review of the service, im entitled to review this service as i am a
buyer

His detection system is so shit it detected a .png file

<https://www.virustotal.com/#/file/170b71c82063d6d2be1a72f7b0968405c3f826c9b2c863b12f3d0f4a60ca2f5e/relations>

Are you idiot or retarded? Look at the virustotal report you posted yourself. It clearly says detection
2/52, you are making yourself look like a fool.

The report clearly says virus/malware detection by clamav.

The malware detection system used in cPanel is clamav which is very popular cpanel anti-virus and
it is used by almost all the hosting companies.

Spoiler ([Click to View](#))

Also, OP wants to sell his services. Why would he set malware detection to detect normal files as malware. Afterall you are not his only client, He also has other clients who host websites which doesn't get detected as virus.

Every seller on HF appreciates honest review but doesn't appreciate stupid ones. As a buyer, you should collect all the information and make yourself enough knowledgable before posting review. ?
