Thread: [Stealthy Cat Spammer - Simple Spammer \[Do NOT Download the Discord Spam Bot-Use This\]](#)

**Effexion** - October 24, 2017, 7:28 am

Made this in VB.NET to help me learn about certain things. Surely someone on here could find a use for it.

DEMO:

[Video: <https://www.youtube.com/watch?v=RjcfVsWBDoo&feature=youtu.be>]

Virus Scan:

<https://www.virustotal.com/#/file/b41cd3e3fc5998aec65d8102e25b9bed7edb4e5f9e69e4680bd20f4e321638bc/detection>

(False positives)

Repo:

<https://github.com/EffexionHF/Phoenix-Spammer-v2.3>

**fxbghacker** - October 24, 2017, 8:07 am

why not upload it to a repo?

**Effexion** - October 24, 2017, 9:05 am

Would appreciate any input on this. Knowledge and advice goes a long way for a noob.

You should definitely get into the habit of naming files appropriately and sorting them into folders. The first thing I do in a new project is delete Form1, make a folder called Forms, then make a new form in there called frmMain/MainWindow (and update program.cs if in c#)

For example: <https://github.com/BahNahNah/PEToolkit/tree/master/PEToolkit>

Code-wise

using

Code Control.CheckForIllegalCrossThreadCall=False is a big no-no. Invoke controls if you need to access them across threads.

Your timer\_tick code would be more suited inside the txtLimit OnTextChanged event, or even better just replace the txtLimit TextBox it with a NumericUpDown.

Doing numeric maths with a string is bad practice.

Code txtCounter.Text=txtCounter.Text+1 Only do maths with numeric types (int/double/decimal/floatetc.) I reccomended using strict mode in VB to help enforce better practice.

<https://docs.microsoft.com/en-us/dotnet/visual-basic/language-reference/statements/option-strict-statement>

Thanks for all the advice. I need to pick VB back up soon or I will forget everything.

Just saw a tool exactly like this was being given away and it was a little shiftty to say the least. Thought I would bring this up for anyone looking for a spammer.
